CASE STUDY FOR SIX INDIVIDUAL 5-A-SIDE PITCHES, DEESIDE LEISURE CENTRE

CASE STUDY FOR DEESIDE LEISURE CENTRE

Project Name: Deeside Leisure Centre

Project Address: Deeside Leisure Centre, Flintshire, CH5 1SA

Size of Project: 4224m² - 6no pitches @ 704m² per pitch

Works Carried Out: The project was a full refurbishment of the existing sand dressed synthetic turf, installation of 5m high rebound fencing to the perimeter of each individual pitch which incorporated rebound panels, 8no floodlighting columns and then installation of a new 60mm sand / rubber infilled 3G monofilament synthetic grass. The new facility is now able to be used both during the day and at night, which in itself has created extra revenue for the leisure centre.

Soft Surfaces takes a pro active responsible approach to its environment and an example of this is that the old synthetic turf which we removed was recycled to lessen the impact on the environment and landfill sites.

"The project ran all within time and budget and it was a credit to work with the professional outfit of Soft Surfaces who was excellent with advice and their professional approach. The completed pitch is now a new facility that is rented out to the public to create additional revenue for the leisure centre. I was overwhelmed with the finished 5-a-side pitches!!

Mike Welch @ Deeside Leisure Centre

BEFORE

The existing surface was in a derelict state and was unusable as it wasn't safe for the public. The 6400m² pitch needed to be fully ripped out along with the old floodlights and fencing as all was in a poor condition. It was basically a full demolition project of an old astroturf sports surface.

REMOVAL OF EXISTING SYNTHETIC TURF

The existing artificial grass surfacing as shown in the pictures below was full of moss, had failed at the seams and needed to be fully replaced. The shockpad also had to be removed; however the macadam base that they had been installed on was still in fine condition to use for the new sub base.

DURING

The 5m high rebound fencing was then installed to the perimeter to each individual pitch, along with the eight floodlight columns. The surfacing was installed primarily for football and designed so that all six 5-a-side pitches could be rented out to the public. The synthetic turf was then infilled with sand to support the pile height and then rubber to meet all the playing characteristics.
