CASE STUDY FOR FAKE GRASS ARTIFICIAL LAWN

CASE STUDY FOR FAKE GRASS ARTIFICIAL LAWN

Project Name: Domestic Garden Artificial Lawn

Project Address: n/a

Size of Project: 46m²

Works Carried Out:

Soon after the new home owner moved in, we were contacted to complete the garden transformation. A basically sound and compact garden, had become overgrown and untidy. Simple preparation and artificial grass has meant the new home owner can now enjoy their time out in the garden , when the weather permits and does not have to complete the usual good weather chores like cutting the grass.

"You have totally transformed our garden, which we now love to use at every opportunity. Visitors always comment on how good it always looks"

Kerry @ New Home Owner

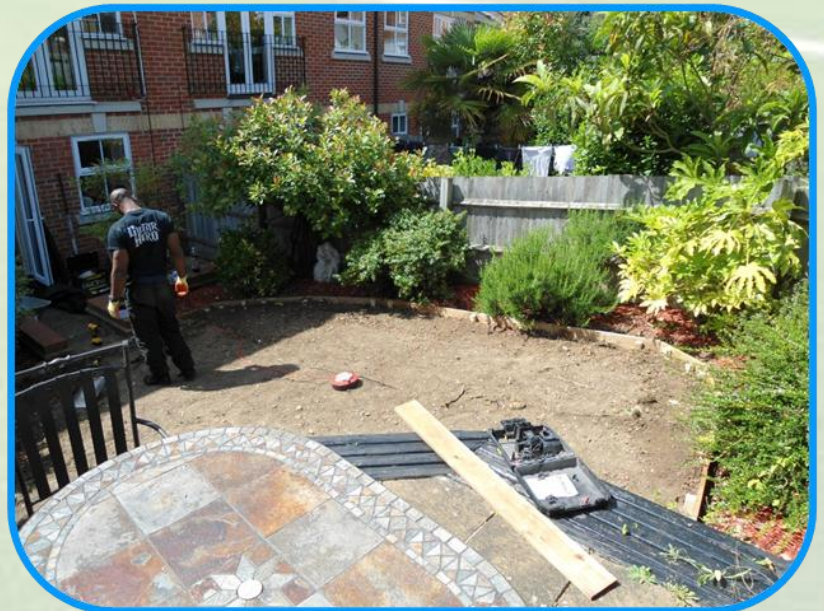

OVERGROWN GARDEN

The existing garden had become overgrown and unsightly. The basic layout features of the garden were ok to use and work with, in the makeover. The garden design was simply to remove natural grass and replace with fake grass to construct an artificial lawn.

ARTIFICIAL LAWN PREPERATION

The area was first weedkilled and then stripped clear. New timber edges were installed to the perimeter. A geotextile membrane was then laid over the compacted sub base. The artificial lawn was prepared for the fake grass to be installed.

FAKE GRASS ARTIFICIAL LAWN

The results were stunning. The fake grass surface made the artificial lawn look real, feel real without the hassle of mowing, mud or watering. They now have an all weather surface that the kids can play on come rain or shine.
