

Soft Surfaces

SPORTS AND SAFETY SURFACES

High Jump Fan

High Jump Fans are most commonly located in the internal sector of an athletics track.

When constructed from new in schools the general size is a 9m radius with a 2m cut off to form the fan shape which is then surfaced in a polymeric surface also known to many as a [tartan surface](#).

There is a 3m x 5m landing area also which can be constructed to form a base for the landing mats but this is usually an extra over cost and is much cheaper to have constructed with the high jump fan.

The tartan surface can be installed in red, light blue, black or [green EPDM](#).
