

## LONG JUMP RUNWAY

### Long Jump Runway

Long Jump Runway and triple jump runways are all the rage in schools and colleges. They are relatively easy to construct and can fit within budgets.

The construction of the long jump run up is an engineered sub base with a coloured [polymeric surface](#) which is to have removable take off boards.

The landing pit has got to be filled with washed and rounded sand and to be filled within a perimeter edge.

The benefits of the [long jump runway](#) are that they are pretty much maintenance free.
