

Soft Surfaces

SPORTS AND SAFETY SURFACES

Macadam Surfacing

Macadam surfacing is a fully porous surfacing system that is able to be played on in most weather conditions.

Porous macadam courts consist of a base course open textured 20mm aggregate and an open textured 6mm aggregate is then used for the wearing course to give it a stronger tight knitted finish.

We recommend, where practical, to install macadam on all our projects, even as a sub base. An engineered macadam sub base offers the greatest possible level of stability to the final surface, resisting frost heave and spreading surface load. These factors will give improved life costs and give greater flexibility for future works, for example: renovations or upgrades to the surface.
