SPORTS AND SAFETY SURFACES

MultiSport 15 Polymeric Sports Surfacing

MultiSport 15 Polymeric Surfacing

Polymeric surfacing is a rubberised all weather flooring used in multi use games areas, MUGAs and sports courts.

MultiSport 15 is very popular within the UK because is ideal for multi sports including football, netball, basketball and tennis.

An ideal project would be to install our [MultiSport 15 Polymeric Sports Surface](#) onto a porous wearing course macadam sub base however with budget restraints we can install directly onto base course macadam.

Where MultiSport15 is installed directly over porous base course bitmac the specific tolerances may not be achieved for professional use however it will be ok for recreational and training purposes.

A moisture cure anti slip paint is applied to the black rubber granule which can be completed in light blue, dark blue, red, light green or dark green with line marking applied for multi sports purposes.

Water House, 35 Water Lane, Wilmslow, Cheshire, SK9 5AR
