

COLOUR COATED MACADAM SURFACES

Colour Coated Macadam Surfaces

A type 1 MUGA and type 2 MUGA both are finished macadam surfaces and the difference between these are simply the slip resistance needed to meet the sports playing criteria.

Type 1 MUGA is a macadam colour coated system with the primary sport as tennis. The slip resistance needed to be achieved is TRRL 60.

Type 2 MUGA is a macadam colour coated system with the primary sport as netball. The slip resistance needed to be achieved is TRRL 75.

The coatings used are water based acrylic paint and polyurethane paint and the intensity of use and slip test determines the correct type for the sports on the [multi use games area](#).

All of these come in a selection of colours to enhance the appearance of the playing courts aesthetically.
