

Wavy Fencing

Wavy Fencing is an innovative and unique style of fencing panel that looks striking in a number of locations, from school and [nursery playgrounds](#) to domestic gardens. The wooden panels can be made single sided or double sided up to a maximum height of six feet. Wavy fence panels will also fit into slotted concrete posts

Made from quality Sycamore hardwood, the slats of each fence panel are individually cut out and carefully sanded to remove any sharp or rough edges. The 15mm thick slats are then pre-drilled before being secured on to 32mm thick batons, using rust proof screws for maximum strength.

All our timber [playground fencing](#) posts and panels are pressure treated with a preservative to protect against rot and insect attack and if properly maintained offer excellent value for money
