SOFT SURFACES COLOUR RANGE

Soft Surfaces Colour Range

We can incorporate contrasting colour's into the [wet pour](#) surface finish.

Here are some examples of the colour's we offer that can be installed in the surface either as a feature or to complete a wetpour design, these are just standard colour range and other colour's and mixes are available upon request.

Our Advice is free and we will be only too happy to talk you through the various options and considerations for your scheme.

We can also produce a design for your surface should you so wish.

The wetpour [playground surfacing](#) is an impact absorbing surface with SBR base course rubber and EPDM wearing course rubber ideal for play areas and meets the HIC test for playground equipment.

Water House, 35 Water Lane, Wilmslow, Cheshire, SK9 5AR
