

SOFT SURFACE LIQUID DE-ICER

In the interests of safety we recommend that the area is not used until thawed out or ice free.

Soft Surfaces Liquid De-icer is an industry leading liquid de-icer, which starts to act the moment it is applied. It is easy and effective to use, as well as being environmentally friendly (biodegradable).

Soft Surfaces Liquid De-icer can be used either to clear existing ice (de-icing), or to prevent ice forming (anti-icing). It is recommended that any snow coverage is cleared first before any application.

So as well as clearing ice that has already formed, the liquid formulation starts to work on contact, to prevent ice from forming and can last for days after the application, unless washed from the treated [playground surface](#).

10 Litre Container £39.95 + vat

Economy Delivery £10.00 + vat per container

Coverage:

10 litres will typically be sufficient to treat approximately 500m², when used as an anti-icing application.

Users need to ensure they have applied enough product to control the ice, however; we provide no guarantees on product performance as it is dictated by ground conditions, rates of use and methods of application etc. This non-toxic and non-hazardous liquid de-icer has been tested on a range of materials (as part of its aerospace approval) and as far as we know it's safe on all clothing, with no problems over the 15 years of supply. However, we haven't tested all materials and so we can't be held liable if someone claims damage to property.

Standard sprayers are ideal to apply it, from simple hand-pumped garden sprayers to more sophisticated 'knapsack' back pack sprayers with handheld booms. For the ultimate ease of application, the [Acuspray](#) sprayer is ideal for simple, rapid application onto the [wetpour](#) safety surface.

Material Safety Data Sheets available on request, for your own product evaluation.

Water House, 35 Water Lane, Wilmslow, Cheshire, SK9 5AR

Soft Surfaces Liquid Deicer

- To prevent ice forming can be applied before a frost. This will prevent ice formation for 24 - 48 hrs unless washed from the treated surface.
 - Application is straight forward, applied undiluted, so no messy mixing.
 - Packaged in 10 litre containers, for easy handling and storage.
 - Non toxic
 - Not classified as harmful if swallowed
 - Biodegradable & non-flammable
- Simple to apply accurately with a range of spraying equipment, (not supplied)

We do not recommend or endorse the use of solvent based de-icer, grit sand or salt as these may damage the surface and reduce the life expectancy of the system.

Important Note: It's a non-toxic and non-hazardous product and there can be a slight vinegary smell following application. This doesn't pose any risk to users etc. but can raise comments, you'll have to assess it yourself to judge along with the MSDS (available on request).
