

WET-POUR SAFETY SURFACING - FLECKS

Colour Fleck Options

Different colours can be mixed together to achieve your desired finish of the [wetpour](#).

Our standard 5% colour fleck can be added to black, to give it a lift as well as giving a visual indicator to children that this is not tarmac.

The photos on the right hand side show a black with 5% colour fleck, a solid green with inlaid graphics and a black with 50% blue fleck which you can visually see looks like a blue surface and is a cost saving solution.

50:50 mixes are a cost effective way of mixing colours together. Please see our EPDM colour samples for the various options on the playground [safety surface](#).

Water House, 35 Water Lane, Wilmslow, Cheshire, SK9 5AR
