

# Welcome to TigerTurf

TigerTurf are the UK's largest manufacturer of artificial grass, with years of experience and expertise used to produce the most realistic looking and feeling products in the industry today. Working with a network of independent national distributors with expertise in installation and maintenance, TigerTurf works to deliver the environment you require.

Artificial turf puts no limit on creative possibilities. The versatile, low maintenance and all-weather characteristics are well known in the sports world, and applications are now being sought elsewhere. Indoor and outdoor artificial grass solutions offer comfort and durability, whilst gardens, patios and decking can all be transformed with an artificial grass makeover.

TigerTurf manufacture a range of hard wearing, attractive and economical surfaces for commercial, civil and domestic requirements where green landscaping is preferred, but heavy usage, maintenance costs, environmental or climatic issues make natural turf impractical.

## Unleashing Possibilities

# Civil & Commercial

## TigerTurf: Civil & Commercial

Already extremely popular in southern Europe the civil application for artificial grass not only saves local governments money, but also alleviates traffic congestion during summer months with no shut down of local roads needed to perform essential maintenance. Ideally suited in hard to access areas such as central reservations or traffic islands where a natural landscape in urban areas is preferred but maintenance and water supply is restricted.

TigerTurf provides an innovative solution where presentation is a premium consideration. Companies and councils can now benefit from a long lasting green oasis in today's concrete jungle, by providing green space for employees to relax and socialise with colleagues in an enjoyable environment. TigerTurf is also ideally suited to internal applications such as atrium and concourse space, meeting and greeting areas.

# Domestic

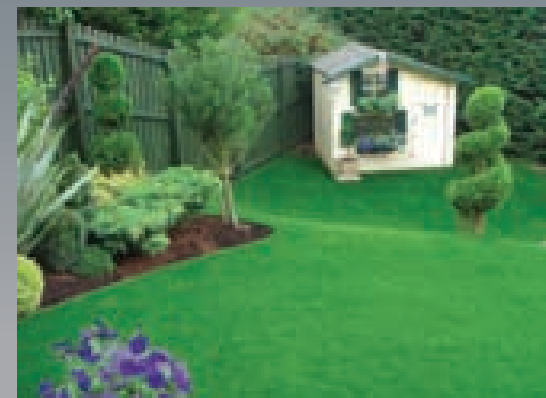

## TigerTurf: Domestic

In today's society people with limited time find it difficult to care for natural turf. TigerTurf gives everyone the opportunity to have the feel and look of a natural grass landscape whilst ensuring children can play and enjoy the domestic outdoor environment.

TigerTurf can be used for a variety of domestic applications, in social housing projects as a green focal point, in cloister style areas or maximising space in a modern roof garden.

In recent years, the demand for artificial grass within lifestyle properties has grown, where the look and feel of the property is paramount but the need to reduce maintenance costs and time is a must.

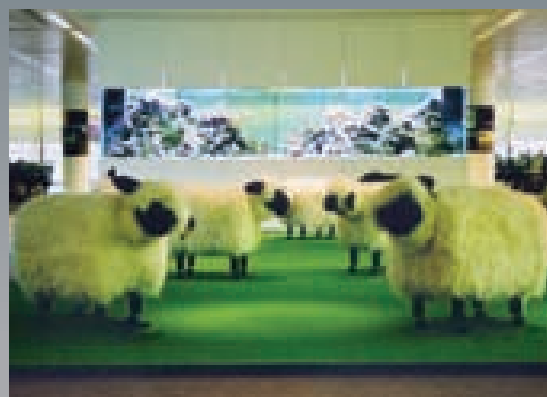

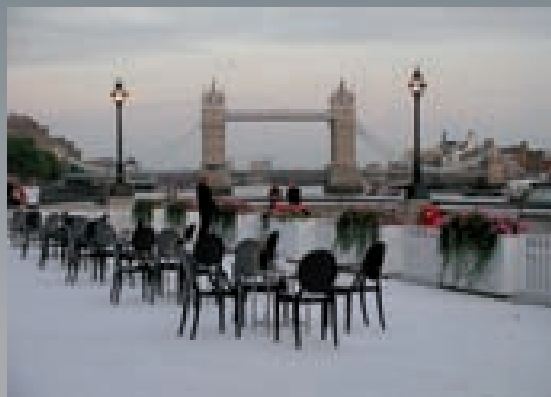

# Exhibition

## TigerTurf:Exhibition

Creating a distinctive setting to showcase your company or product is essential to attract attention at any event. TigerTurf offer a range of products for the exhibition arena that simulate the outdoor environment, offering the durability needed to withstand high levels of footfall in a concentrated area.

More and more temporary areas are using artificial grass as an alternative to carpet, the wide range of colours and interactive texture creates an eye catching and professional image for your company.

# Play

## TigerTurf:Play

The importance of balancing fun with safety occupies parents and carers minds, so it is little surprise that more and more play areas feature artificial grass. Children love the natural appearance and soft feel, allowing their imaginations to run wild, whilst the clean environment is an extra bonus to parents.

TigerTurf Play products can be installed to achieve three safety fall height options, when installed in conjunction with the correct shock pad, offering the perfect solution for nurseries, junior schools and community playgrounds.

TigerTurf Play surfaces enable outdoor activity and learning for children to occur all year round, whatever the weather.

# Installation & Maintenance

## TigerTurf: Installation & Maintenance

The quality of installation is monitored through TigerTurf's approved distributor network. The process begins with the removal of existing turf or organic material, followed by the initial laying of aggregate which is then dressed with sand, this is necessary to achieve the correct drainage and level requirements. The TigerTurf surface is then laid on the prepared area and top dressed with sand and rubber if required. All joins and seams are treated using the most appropriate materials and are installed with a tolerance at the join of a gap no larger than the gauge or line of tufts. It is recommended that the installation process is not carried out in temperatures below 10 °C or in wet conditions.

To maintain the TigerTurf surface and ensure it keeps looking natural and drains effectively, the surface should be kept free from vegetation and general rubbish. Depending on the type of surface a drag mat or brush can be used to stop contaminants having a detrimental effect on the way TigerTurf looks and feels.
