

Type 75

GRP-GS-TYPE75GR x 500mm wide. Length to suit span. (Half lap joining system.)

- Recessed collar- Counter sunk- Dome head bolt and washer

Pultruded GRP-GS-TYPEGR PRODUCTS are manufactured by combining various resins with pure glassfibre reinforcement. They are formed and cured in a continuous process creating a product of extraordinary strength and resilience. The resultant profile offers a combination of benefits and mechanical properties exceeding those of metal.

Weighing up to 80% less than steel and concrete, GRP-GS-TYPEGRS offers equivalent performance for considerably less weight. This results in major weight savings and lower installation and servicing removal costs due to more economical transportation, handling and on site positioning.

The high strength to weight ratio has particular relevance for many applications in the structural flooring, pontoon, trench, gully and duct cover industries.
