Service & Calibration

complete support for owners of noise & vibration meters, gas detectors, air samplers and more.....

- Full Customer Support & Technical Back Up
- Quick Turn Around
- 'Premier-Cal' 4 Levels of Service Basic, Standard, Plus & UKAS
- FREE Evaluation Service
- UKAS Accredited Calibration Service
- Any make any model
- All Calibrations are traceable to National Standard at NPL
- Highly Trained & Experienced Service & Calibration Team

Service & Calibration

Castle's Premier Calibration Service

Castle's Premier Service and Calibration solutions offer any owner of technical safety or environmental monitoring equipment a centre with unparalleled customer support, technical backup and turnaround times. We also offer clear and simple fixed band pricing which means you know where you stand right from the outset.

OUR SERVICE...

• PREMIER SERVICE PLEDGE

The Castle Group premier service is a pledge to our customers that, wherever possible, we will turnaround service and calibration work within 5 working days of receipt of the equipment and an official order.

• CERTIFICATION

Service charges include an NPL (National Physical Laboratory) traceable or UKAS accredited calibration certificate where applicable. A Calibration Results report is also available.

• UKAS

UKAS accredited calibration is also available for most equipment.

• REPLACEMENT PARTS

Major components are available if required for most types & makes of monitoring equipment.

• COLLECTION SERVICE

We are now able to offer a collection service from any UK postal address.

FREE EVALUATION!

If you have a damaged or old piece of equipment or are simply unsure of what might be involved, then you can send it to Castle for a FREE evaluation service where we will assess the unit and offer advice on the best course of action, if you don't want to go ahead, we'll return it to you free of charge.

CONTRACT CALIBRATIONS

Never get lumbered with an out-of-calibration instrument again.

Many organisations have a selection of monitoring and measuring equipment for health and safety and environmental applications. This can range from a small box-full to a whole room-full. At Castle we can take the hassle out of organising all the calibrations through our contract-calibrations service. We log all your equipment and then remind you when it is due for calibration. We can even arrange for the collection!

CALIBRATION LEVELS

FOR A LEVEL OF PRICE & SERVICE THAT FITS YOUR REQUIREMENTS

BASIC

This service provides a functional check and, where possible, 3 points of calibration. Suitable for more basic equipment or less demanding applications.

STANDARD

A more thorough calibration check, with multiple test points and verification to the relevant instrumentation standard; this level of calibration is suited to more complex instruments.

PLUS

The Plus calibration is the same test as the Standard service, but includes a full set of documented results; often important for evidence in quality systems.

UKAS

The United Kingdom Accreditation Service (UKAS) seal of approval is the ultimate in traceability and references directly to a national standard. A UKAS certificate is the ultimate in confidence and credibility.

Castle make it simple to help you stay legal!

There are many ways in which you could be breaking the law, contravening an International Standard, or worse still, leaving yourself wide open to litigation, not even being aware that you have a health and safety equipment problem! At Castle, it is our business to support and guide you through the sometimes complex process of solving such problems by providing quality regulated calibration for a wide range of environmental and health and safety issues.

Noise, Vibration, Air, Gas...

Taking the hassle out of technical equipment calibration

Because we specialise in the calibration of instrumentation for technical health and safety and environmental monitoring, we know what matters to you; fast turnaround, competent staff, competitive pricing and simplicity of using the service. This means we have tailored what we offer to be what you need.

SOUND LEVEL METERS

The calibration of Sound Level Meters is an in-depth process and one we have over 35 years of experience in. It doesn't matter what the make or model, we can calibrate it. We can also repair just about anything no matter how old and, if not, we'll offer you a handsome trade-in against a new one.

VIBRATION METERS

The complexity of field calibration for Vibration meters means your factory checks must really count. Human vibration exposure is also a prime area for litigation & a defence can fall or stand based on the evidence of calibration and traceability. We can calibrate just about any vibration meter, whatever the application.

GAS DETECTORS

It is a requirement to have gas detectors calibrated every 6 months and to that end, a fast turn-around is imperative. That's where our Premier Service Pledge comes in. You also don't want to be messing around with too much paperwork, so you can avoid this with our Contract Calibrations option.

AIR SAMPLING EQUIPMENT

The mechanical nature of sampling pumps and calibration equipment means they need regular servicing. The calibration equipment itself needs calibrating to ensure accuracy, which could affect your monitoring. Check into our contract calibrations service for hassle free scheduling and calibration management.

...we also offer calibration for...

- ANEMOMETERS FOR AIR FLOW
- AUDIOMETERS
- BAROMETERS
- HYGROMETERS
- LIGHT METERS
- ELECTRICAL TEST EQUIPMENT
- FORCE METERS AND STRAIN GAUGES
- MOISTURE METERS
- PRESSURE METERS
- TACHOMETERS
- THERMOMETERS
- TIMERS
- WEIGHING EQUIPMENT

WE CALIBRATE ALMOST ALL EQUIPMENT, IF ITS NOT ON THE LIST, JUST ASK!
