systems limited

## Mobile & Static Island in Detail

To complete your Toprail system, we have a range of mobile and free-standing units that will support any component that can be mounted on a slotted upright.

### Mobile Units

Mobile units are 1950mm high and manufactured to support two x 600mm bays. They have heavy-duty braked castors that allow easy movement from one location to another and that lock the unit in place when stationary. Mobile units are fitted with foam buffers on the lower frame to prevent damage.

The frames are manufactured from aluminium box section and powder coated in silver, with white solid powder-coated aluminium back panels. The overall size of the unit is 1325mm wide x 535mm deep x 1950mm high.

Mobile Unit ready to accept the required furniture

### Static Island Units

Static island units are 1800mm high and available in 1230mm or 1530mm widths. They can be single or double sided to provide maximum flexibility of use, particularly when placed within the central body of a room. If longer widths are required, these units are simply linked together to form a solid assembly.

The frames are constructed from silver powder coated aluminium box section with matching vertical supports and white powder coated aluminium infill panels.

Slotted uprights are bolted in position on both mobile units and static island units to support the full range of standard components such as shelving, worktops, cupboards and storage assemblies.
