Specification of Materials

Timber

- We use selected first grade timber from sustainable commercial plantations with at least 70% sourced from forests independently certified under the Forest Stewardship Council.
- Timbers are cut free of the heart of the log and square sawn with chamfered edges.
- All timbers are pressure impregnated with a chrome and arsenic free preservative which protects against decay and insect attack for 20 years.
- Horizontal timbers are secured on top of uprights by way of custom made brackets to maximise the load bearing capacity.
- All end grain is capped to prevent moisture entering exposed uprights, as well as cover rough end grain.

Steel

- Hot dip galvanised or
- Shot blasted, etched and electro-statically powder coated to EN 45011.

Panels and Roofs

- High density self-coloured polyethylene panels or
- Half machine rounded timber secured to steel frame.

Floors and Ramps

- Birch plywood exterior panels impregnated with dense rough wire mesh pattern to give a slip-resistant finish.

Ropes and Nets

- Multi-filament steel core ropes secured with hydraulically pressed end connections and custom made tamper-proof net joins.

Chains

- Small link galvanised chain.

Springs

- Coil designed not to compress and cause entrapment under load.

Fastenings

- Tamper-proof recessed mushroom head bolt, which do not require capping.

Swing Seats

- Rubber, with honeycomb construction sides for maximum impact absorption.

Construction

- Foundation for uprights 750mm deep and uprights secured in concrete block 6000mm x 400mm.

Guarantees

Timbers

- 20 years against structural failure caused by rot or insect infestation.

Panels, Roofs, Slide Sides and Themed Play Products

- 5 years against structural failure.

Platforms, Floors and Footholds

- 5 years against structural failure.

Chains, Coupling Links and Shackles

- 5 years against structural failure.

Ropes, Nets, Rope Bridges and Rope Pulls

- 3 years against structural failure.

Bolts and Security Fastenings

- 10 years against structural failure.

Springs

- 5 years against structural failure.

Playsafe Surfacing

- 5 years normal use.

Installation and Site Work

- 2 years against faulty workmanship and defective materials. (Problems arising as a result of soil erosion or subsidence are not covered).

Maintenance

We recommend that all equipment be inspected on a regular basis — this can be carried out internally — frequency depending upon level of usage. We also recommend that a detailed check and service be carried out annually. We can offer an annual fixed price check. Contact our customer services department for any further information.

After Sales Service

We have a dedicated service department to deal with all maintenance requirements, including supply of spares from our comprehensive stock, on site maintenance, inspection and servicing of equipment.

We reserve the right to change the specification and design of products without notice.

All equipment and surfacing is designed, manufactured and installed to comply with requirements of BS EN 1176 & 1177.

Playground Surfacing and Fencing - Brochure Page 37

Surfacing Requirements

Impact absorbing surfaces should be used where the free height of fall of equipment is over 600mm. Top soil or turf may be used up to 1m providing the surface is well maintained.

Whilst impact absorbing surface is not required where the free height of fall of equipment is 600mm or less, it is recommended that a surface with impact attenuating qualities be used.

Area Requirements

The area requirements as set out in EN 1176 are shown by each item of equipment in this price list. There are no area requirements for 600mm or less, but we suggest 1m minimum.

Types of Impact Absorbing Surface Synthetic Surface

Playsafe - Outdoor sports surface tested for compliance with the requirements of EN1177.

Types of Impact Absorbing Surface Synthetic Surface

Playsafe - Outdoor sports surface tested for compliance with the requirements of EN1177. Can be used to combat soil erosion or with the addition of impact absorbing material as a safer surfacing. It is not as heavy as rubber and can often be installed onto grass or top soil without the need for an expensive base. The surface is softer than rubber and falls are less likely to result in friction burns.

Includes rubber wet pour or tiles, artificial grass, outdoor carpet or mats. The specification and cost is dependent on the free height of fall of the equipment and the ground preparation required.

Rubber Wet Pour and Tiles - Installed on a prepared hardcore or concrete base. It is sometimes possible to use existing concrete or tarmac as a base. Rubber wet pour is prepared and mixed on site.

Loose Fill

Materials commonly used include bark, wood chip, sand or gravel. As a guide a

minimum depth of 300mm is required. Whilst the initial cost of loose fill is often less than synthetic surfacing the maintenance costs are higher as regular raking, cleaning and topping up is required. Loose fill areas can also become water logged inhibiting the use of areas.

Cost of Surfacing

The cost of surfacing depends upon the free height of fall of the equipment and on the amount of site preparation required, which can vary enormously from site to site. As a guide Playsafe for free heights of fall to 1m from £39m² installed on a hard surface to £50m² installed on grass or top soil compared with wet pour on a prepared base from £39m² to £100m² plus including base preparation.

We recommend Playsafe surfacing as the perfect compliment to **Creative Play** equipment.

Available in blue, green, yellow, red and terracotta, this versatile surface can be used on grass, topsoil or existing hard surfaces such as tarmac or concrete.

Tested to British Standard BS EN 1177, it provides a hard-wearing, all-weather surface and can brighten up any play area. You can include an inlaid design such as hopscotch, alphabet snake or stars to increase the play value of your surface and cheer up your area.

Our play advisors will be happy to advise you on the range of designs which can be incorporated into Playsafe Surfacing.

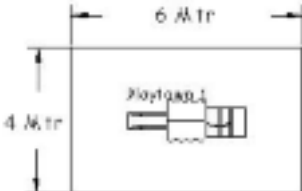

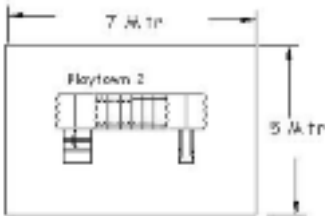

We can also supply fencing, planters, and signs.

Impact absorbing surfaces should be used where the free height of fall of equipment is over 600mm. Top soil or turf may be used up to 1m providing the surface is well maintained.

Whilst impact absorbing surface is not required where the free height of fall of equipment is 600mm or less, it is recommended that a surface with impact attenuating qualities be used.
