

YOUR OWN PLAYGROUND

IJSLANDER

3 Ijlander lets children play

Children naturally enjoy exploring and pushing back their boundaries.

4 Sustaining in product and company

Stainless steel is 100% recyclable without any loss of quality.

IJslander is a total supplier

We carry out all the steps between a request and maintenance ourselves with our own internally-trained professionals. This ensures that the lines of communication and delivery times are short, that staff is closely involved with the products and that the status of your order or request is always clear.

IJslander lets children play

It goes without saying that **safety** remains an important aspect in the development of our play equipment. IJslander of course meets the European safety standards, but also actively challenges itself to come up with extra **safety solutions**, without adversely affecting the pleasure children have playing on the equipment.

The requirements and wishes of the **child** play an important role in both the design of the individual equipment and in putting together the eventual play area. The final production and installation process is, of course, also dependent upon factors such as manufacturability, costs and sustainability. The focus, however, remains on the user at all times. After all, a completely recyclable and affordable playing environment is only of use if children actually come to play there. It is therefore important that playground equipment is recognisable and attractive to children, through, for example, a well-chosen design and the **use of colours**.

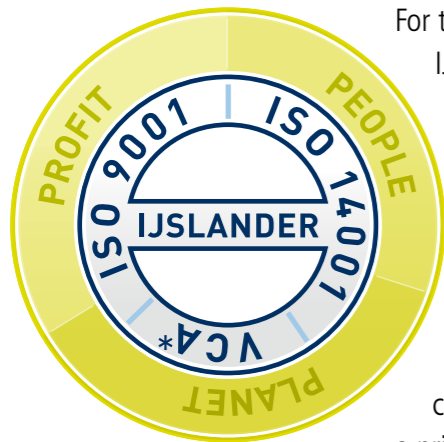

Research has shown that one of the most important factors that makes playground equipment appealing to children is the **challenge** they provide. Children naturally enjoy exploring and pushing back their boundaries; they, for example, want to climb even higher and take evermore difficult routes upwards. Variation in **play functions** is also important for the appeal of a playground. Children do not get bored easily at a playground if there are different things to do.

Sustaining in product and company

With IJslander products you choose quality and sustainability. Our products are made of stainless steel, which gives them a long life, makes them resistant to vandalism, and makes them resistant to wear with normal use (with the exception of any moving parts). Compared with the equipment of other companies, our products require very little maintenance.

The sustainability of our products is seen not only in the life of the equipment but also in the reusability of the material: stainless steel is **100% recyclable** without experiencing any quality loss, and IJslander is able to reuse most of its equipment and turn them into new products. This ensures that our products do not result in any waste for the environment throughout their life cycle. The materials of the moving parts are also **fully** recyclable.

For this sustainable approach IJslander has earned ISO 9001 and 14001 certificates, is SCC* certified and works according to the ISO 26000 standard, so that you can be sure that safety and the environment are optimally **assured**. We regard corporate social responsibility as a priority.

100% RECYCLABLE

IJslander is constantly on the lookout for **product innovations** for both its existing and newly designed playground equipment. This includes new constructions that make the equipment more **user-friendly** or require **less maintenance**, as well as studies into the way in which children play.

IJslander, a partner in playground equipment

In addition to the long life of IJslander playground equipment, you can also expect a good service and guarantee:

20 years

On construction faults in the main structural elements: this includes standards or play elements, of which the welds or other components become loose without any immediate cause;

10 years

On structural elements of the playground equipment, with the exception of vandalism;

3 years

On moving parts and/or parts liable to wear, such as nets and bearing constructions.

Vandalism and damage

The **guarantee** is only valid if the products have been installed according to the instructions of IJslander and have been **maintained** in the correct manner. The guarantee does not apply to any discolouration or superficial damage, nor to any cosmetic damage. Damage as result of incorrect use and vandalism is also not included under the guarantee. When placed near the coast, you should take account of the necessary extra maintenance in order to prevent corrosion. IJslander will be happy to inform you further on the possibilities for this.
