controls

## MA110 mini

### The modular armrest MA110 mini

- + position and type of operator controls are individually configurable
- + preconfigured standard inlays make the armrest a cost effective option
- + ideal for small cabin spaces thanks to its space saving design, e.g. it can be mounted directly at the seat backrest

### Features and configuration possibilities

- Control of attached devices and the front loader:
- + multi axis joystick J2 with configurable joystick handle
  - + single axis fingertip joysticks JFT

### Various configuration options for display control or function control:

- + PTO push button switches
- + nano push buttons or micro push button switches
- + encoder
