COMPLETE CONTROL WHEREVER YOU ARE

ACTIVATE > GENERATE > CONTROL

NetCode enables the lock owner to generate time-sensitive codes for locks installed remotely.

NetCode feature is activated on the lock before shipping to the installation site via the web-based NetCode portal. The NetCode portal registers the lock and enables generation of time-sensitive codes for one or multiple locks, worldwide. NetCodes, being time-sensitive, are a more secure way to grant access to remote site or users as the code will not work outside the designated time slot. Generated codes can be sent to any email account or mobile phone via SMS direct from the NetCode portal.

NetCode is particularly useful when access is required for routine maintenance or one off service repair visits. For example, where service engineers visit many locations in one day and having keys is impractical. The ability to send time-sensitive codes for immediate access or planned timed access has significant benefits.

- No more lost, stolen or forgotten keys for the locker or enclosure; or if 'fixed' codes are used as on standard products, the possibility of access codes being transferred to others.

- The NetCode portal will record where, which lock, for how long and to whom the NetCode was issued. **A Powerful Management Tool**

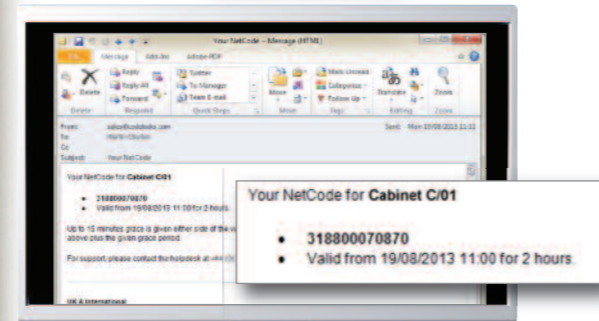

As well as enabling more efficient access for field service personnel, KL1000NC can be used in many different applications. For example, to better manage courier drop boxes – delivery personnel can be given a time-sensitive access code that will only work for a specific order.

Or for managing locker rental – businesses that hire out lockers for a variety of different services, such as temporary storage, can use NetCode to manage time-sensitive access codes on a large scale.

Your NetCode:
318800070870
Valid from 19/08/2013
11:00 for 2 hours.
Contact helpdesk for support.

The KitLock 1000 NetCode allows temporary access to lockers and cabinets via the web-based NetCode portal.

The NetCode Process

- Create a NetCode that will work between a start and end date ideal for **long durations**.
- Create a NetCode that will work from a particular date and time ideal for **short durations** of up to one day.

*Additional charges apply – Buy SMS credits from CodeLocks to enable sending of NetCodes via SMS straight to mobile phones

- Create an online account and register your lock on the NetCode portal www.kitlock.net
- Activate your lock and install
- The portal enables you to create NetCodes from any browser capable, internet enabled device
- Create NetCodes online for short or longer access
- Create NetCodes via SMS* for instant access
- Send codes via SMS* or email
- View history of each lock – displays all codes created for a lock including start date, duration, who received the code and any additional notes
- Customise your portal and notifications
- Ideal for remote lockers/cabinets and rental applications
