

# GRIP WRAP

## VIBRATION-REDUCING TOOL HANDLE WRAP

*Improves tool control*

*Easy to apply and customize*

*Comfortable gripping surface*

*Helps to dampen shock and vibration*

*Use in tools with open or closed handles*

*Available in 1/8" and 3/16" waffle thicknesses*

### Using the GRIP WRAP

1. Identify the area of the tool where the Visco-Elastic Polymer waffle sheet is to be applied and cut the sheet to desired size
2. Clean tool handle to remove dirt or grease
3. Remove paper backing on sheet and with waffle side out, wrap sheet around the tool handle. Where the sheet begins to overlap, mark with a pen and cut with scissors. The original end and the newly trimmed end should meet with no overlap
4. Spirally wrap the tape over the Visco-Elastic Polymer with the blue line showing. The thin tape should overlap half the width of the tape per wrap around the handle. Use the blue line as your guide. While wrapping the tool handle peel the cellophane backing from the tape and stretch the tape to ensure proper scaling
5. Once the Visco-Elastic Polymer has been covered, cut the tape from the spool
6. To ensure correct fit, use knife or small scissors to cut Visco-Elastic Polymer away from trigger, vents or other areas of the tool to prevent interference with normal and safe use of tool

### GRIP WRAP KIT INCLUDES

One each 13" X 5" sheet of Visco-Elastic Polymer  
Models 9067 (1/8"), 9065 (3/16")

One each 4 yards self-adhesive silicone rubber tape
