

Specification Advice

For laying
SureSet flexible resin bound aggregate surfacing

Internal Floors (solid)

Clear water resistant sealant can be applied if required.

The typical depth of SureSet Permeable Paving surface:

A SureSet aggregate size of 3mm requires a 8mm depth layer of SureSet
A SureSet aggregate size of 6mm requires a 12mm depth layer of SureSet

Screed (laid by others)

Minimum depth 25mm bonded screed
Minimum depth 50mm unbounded screed

Damp Proof Membrane

For use with unbounded screed

Sub Floor Slab

Minimum depth 100mm concrete e.g. GEN1 Designated mix BS8500 S2 slump

Insulation

To comply with Building Regulations

Damp Proof Course

With bonded screed

Sand binding layer

Consolidated Hardcore

Purpose

To provide an attractive, durable and seamless finish.

Advantages

Rapidly applied and can be brought into service without delay.

Notes

Screeds should be clean, dry and free from any contaminants. Primer will be required before installation of SureSet. Movement joints/construction joints in concrete should be extended up to the surface of the SureSet. Cracks should be broken out if necessary and filled with a polymer/cement crack filling material.

This specification is based on normal good practice for flexible surfacing and does not absolve the specifier from designing a construction suitable for the expected traffic and ground conditions pertaining on a given site.
