Secomea Remote Access

Remote programming, data logging and monitoring

How it works:

1. Install SiteManager at the remote location and connect to the machine network via Ethernet, USB or Serial
2. The SiteManager connects to a GateManager centralised server via local network, 3G, 4G or WiFi
3. Create, deploy and manage LinkManager accounts via the GateManager web portal
4. Install LinkManager and secure certificate on engineer's laptop or PC
5. Open LinkManager and connect to the remote network
6. Use the device as though connected locally for viewing and programming

Getting started:

1. Choose SiteManager model
2. Order a Starter Package and hosted GateManager cloud account or use your own server (from £345)
