

What is Hard Water?

Hard water is caused by the chalk / limestone (Calcium Carbonate) deposits present in the ground dissolving into the rain water which, when it has been treated, eventually comes into your house.

The problems you can see are where scale has deposited in various appliances and around taps and shower heads but what you cannot see is the steady build up of limescale around the heating coils and immersion heater or the heat exchangers in your boiler.

The results are not only the serious reduction in heating efficiency (see graph) but also the eventual breakdown of components in showers, washing machines, dishwashers and of course the immersion elements themselves.

A GREEN PRODUCT:

LP units help keep down greenhouse gasses and can save up to 40% on heating fuel bills. The reduction in fuel costs and the reduction in carbon dioxide emissions help YOU and the PLANET.

A HEALTHY PRODUCT:

Water conditioned with a LP unit brings health benefits to you and your family. Many sufferers of ECZEMA and PSORIASIS have claimed complete cures for their condition due to the softer and kinder water. In addition to this the CALCIUM in the water remains and is not removed as with Ion Exchange softeners meaning that the water is HEALTHIER to drink. Calcium is good for your bones and your heart.

BENEFITS OF A LITTLE PLUMBER WATER CONDITIONER

- ✓ Removes existing limescale
- ✓ Prevents new scale forming
- ✓ Easy to install
- ✓ Protects appliances
- ✓ Cheaper than a traditional water softener
- ✓ No need to use salt
- ✓ No need to maintain
- ✓ Cost only £2.00 per year to run
- ✓ Will pay for itself in the first year

WHAT ARE CUSTOMERS SAY...

"We installed the LP units in September 2003 and over 5 years later are still very pleased with them. Not a trace of limescale anywhere and our heating is very efficient. "Well done Little Plumber!"
Roger Cook, Grace Baptist Mission, Abingdon

"I bought an LP device about a month ago and just wanted to let you that it is working really well. My two small daughters had very dry skin, even when using baby lotion after every bath, and it has almost completely gone now. Thank you very much"
Mrs Y.F.

"We bought an LP1 in October 2007 and just thought you would like to know that it has performed extremely well. The water is diamond hard here and it has literally saved us a fortune."
R.Caird Bury St Edmunds

INSTALLATION:

Domestic units can be fitted by a competent handyman. If however you cannot access a suitable power supply then it is advisable to enlist the service of a qualified electrician or plumbing & heating engineer.
