

Rail mounted
Liftronic Easy

In 1970 Scaglia Indeva was the first Company in the world to apply electronics to industrial manipulators. Today Scaglia Indeva are world leaders in the design and production of Intelligent Devices for Handling, with the unique Liftronic Easy.

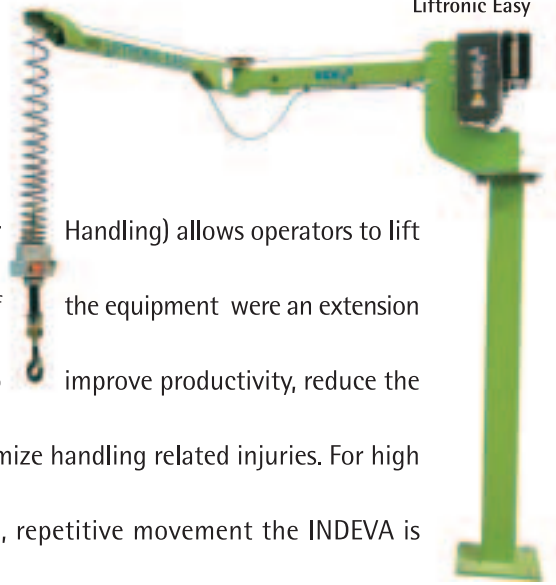

New Liftronic Easy

- Faster Response and Enhanced Ergonomics
- More versatile and reliable
- Easier to use

INDEVA
INTELLIGENT DEVICES FOR HANDLING

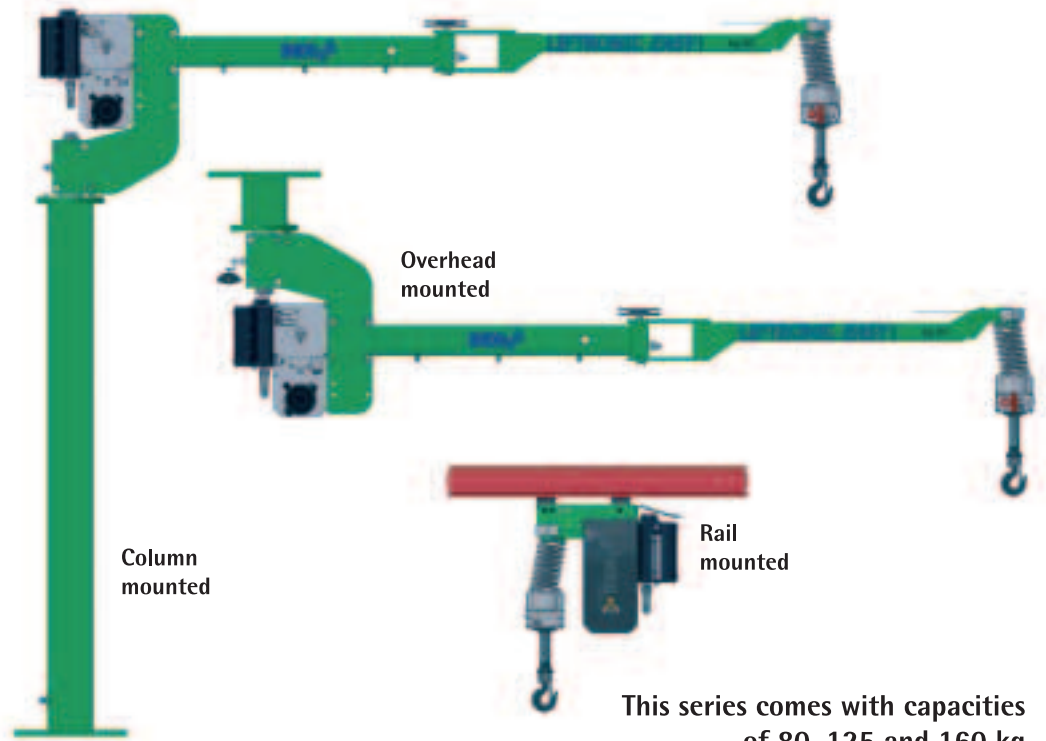

An INDEVA (Intelligent Device for Handling) allows operators to lift and handle loads naturally as if the equipment were an extension of their own arm. The INDEVA help improve productivity, reduce the cost of product damage, and minimize handling related injuries. For high value products that require rapid, repetitive movement the INDEVA is the safest and most productive handling system available as it provides the responsiveness and flexibility of a human operator plus the power of a machine; it is perfect for quick, repetitive movement and slow, precise positioning.

LIFTRONIC EASY has been upgraded

- New sensors and a new software provide even greater responsiveness to the operator's touch
- New improved design using modular components has increased the versatility of Liftronic Easy and made it even more reliable. It is much easier to adjust the system to different production requirements.
- The design of all main wear parts have been revised in order to make maintenance easier and faster;
- All work parameters are visible on the display panel placed on the control head, this makes fault finding immediate and user friendly.

LIFTRONIC EASY 04 RANGE

Float mode.

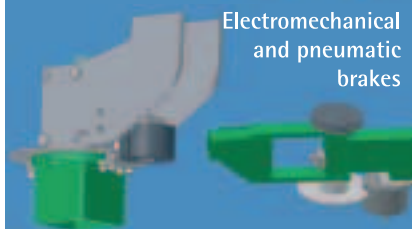

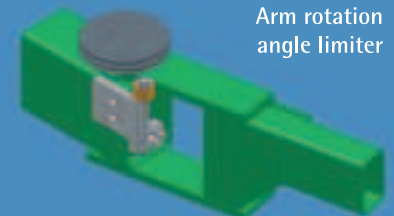

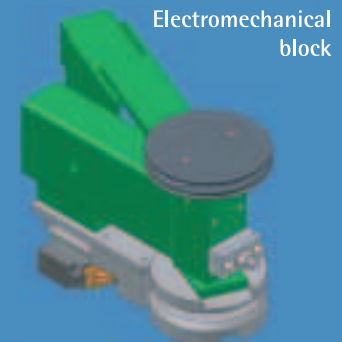

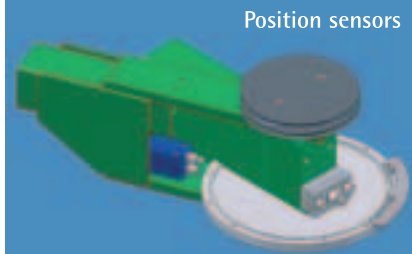

It allows operators to perform precision tasks with their hands on the load itself for maximum control. The operator can handle loads as they were weightless.

In-Line force sensing Handle mode.

It allows easy, power assisted up-down movements. The operator simply grips and gently moves up or down to manipulate loads as if they were weightless.
