# Benefits of fabric graphics

Fabric graphics are easy to transport, install and handle. They are wrinkle and stain resistant and can even be dry-cleaned. Fabric fibers are dyed directly during the dye-sublimation printing process, which improves the durability of colors over time

## Benefits of dye-sublimation printing

Sublimation is the process by which a solid changes directly into a gas. The fabric fibers are dyed directly, which improves the durability of colors over time.

### Advantages

- + Intense colors: dye-sub offers unparalleled quality of contrast, intensity, and depth
- + Anti-reflective: sublimated fabric absorbs light and thus eliminates any reflections on your image
- + Eco-friendly process: the printing process and its inks are environmentally-friendly solutions that do not contain solvents and are free of unpleasant odors.

## What is SEG?

SEG (Silicone Edge Graphic) is the combination of a dye-sublimation fabric graphic with a thin silicone strip sewn directly to its edges. This strip is inserted into the groove of our Aluminium frames to produce a seamless, large format graphic that mimics the old-fashioned rigid panel graphics commonly found with exhibits and interior signage.

## Why choose SEG?

- + Quicker set-up = lower labor costs. SEG graphics are easy to install and dismantle
- + Lightweight = lower shipping & drayage costs. SEG graphics weigh significantly less than other print media, making them easy to carry, ship, and store
- + Seamless and polished finish. SEG graphics stretch taut over the frame without any seams, lines, or wrinkles to create a very high-quality appearance for your booth

# Artwork guidelines

Our design team helps you create your artwork. If you would like to create it yourself, we will supply you with templates and measurements. Please follow the instructions below to ensure a high quality graphic.

## + **Templates**

Use our artwork templates to ensure the measurements are correct.

## + **File format**

PDF. Save the file as “Press Quality No Downsampling”. All fonts should be vectorized.

## + **Image resolution**

Included images should have at least 100 dpi resolution on a scale of 1:1.

## + **Colours**

Use CMYK or PMS colours.

For best blackness, use 20 % cyan, magenta and yellow.

RGB colours are not accepted.

Please follow the above instructions for optimal print production. If not followed, we cannot be held responsible for the print quality. If adjustment of your original file is required, it will include an extra fee.
