Antennas in production

Antennas in production

Cobham Antenna Systems, Microwave Antennas - specialists in the design and manufacture of microwave antennas for Defence, Security, Satellite and Commercial systems, worldwide.

We constantly develop antennas for new and emerging markets and applications.

We have more than 1000 antenna designs available, directional flat panel, sector, omni, hemi omni and ultra wideband antennas, that are supplied direct to customers.

All antennas are tested throughout development to ensure they meet quoted specifications and comply with relevant legislation.

Environmental testing can be carried out to recognised standards.

Applications include WLAN, Link16, Surveillance, Telemetry, Electronic News Gathering, WiMAX, Common Data Links and Radar in locations as diverse as unmanned airborne vehicles, helicopters, aircraft, missiles, race cars, railway systems, TV cameras, weather buoys and satellites.

The company's production, development and testing facilities are based in one UK location for fast transition from design to production.

Our antennas are supplied to some of the largest organisations and companies worldwide, with over 60% exported.

Antennas under test

Antenna Development Projects

We undertake antenna development projects. To find out more please telephone or email direct to: newmarket.sales@cobham.com

For assistance in selecting your antenna from our existing catalogue please email direct to: newmarket.sales@cobham.com

Information on existing antenna designs is available on our website:

Antennas: www.european-antennas.co.uk

Cobham: www.cobham.com/antennasystems/newmarket

Our Antenna Catalogue and other literature is available in PDF format and can be downloaded from the above. Printed copies are available on request.

Cobham Antenna Systems, Microwave Antennas has been part of Cobham plc since 1999.

European Antennas Ltd, (formed 1991) trading as Cobham Antenna Systems, Microwave Antennas.

Located in a single centre of excellence for the design, test and manufacture of antennas.

- Our reputation is based on our customer focused antenna design and development, supplying high performance antennas from 100MHz to 40GHz
- Proven expertise in all aspects of RF performance
- More than 1000 existing antenna designs
- Appropriate mechanical design to meet the specified environment
- Approved supplier to international defence organisations
- Mil standard qualification available
- ISO9001 certification

Engineering

Combining comprehensive knowledge and experience with the latest software design tools, the engineering team design antennas with optimised RF performance to meet our customer's specific requirements.

Antennas under test

ISO9001 certification

ISO9001 certification forms the cornerstone of our customer service ethos to ensure that the company resources are focused on providing the optimum antenna solution to meet the needs of our customers.

Engineering, Technology and Test

Monitoring antenna under test

Antennas in production

Spherical Near-field Test Range

Measurement Capabilities

Frequency Range	0.4 to 20 GHz
Max Antenna Dimension	1.5m
Max Antenna Mass	50 kg
Max Antenna Directivity	40dBi
Measurement Method	Multi-frequency spherical near-field
Measurement Platform	PNA-X network analyser
Measurement Time	Depending on antenna specification and frequency

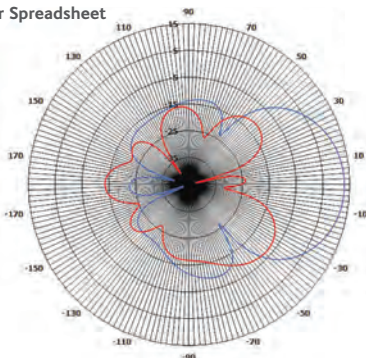

Antenna under test

Data Extraction Capabilities

- Far-field gain over full 3D surface
- Far-field axial ratio over full 3D surface
- Far-field phase over full 3D surface
- Performance data in Cartesian or polar formats
- Text files of performance over full 3D surface
- Holographic back projection to antenna surface
- Near-field raw data

Polar Spreadsheet

The on-site spherical near-field test facility is an example of our commitment to enhancing development facilities and technical support service to customers.

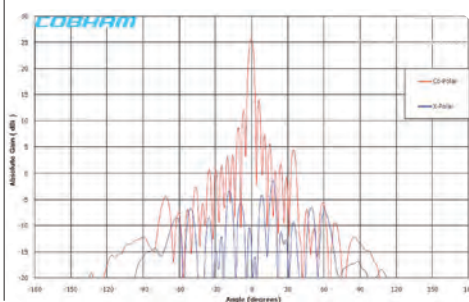

This facility provides radiation pattern data to verify specifications and to ensure compliance with stringent radiation pattern envelopes where necessary. The far field radiation pattern of the antenna can be calculated in any direction, in any polarisation, circular or linear, at any angle.

Operating within 0.4GHz to 20GHz, it has full dynamic range performance down to 0.8GHz, and sufficient sensitivity to test antennas in the lower frequency range.

Testing times depend on antenna size in wavelengths and the number of measurement frequencies. Gain measurements can be provided as well as directivity.

An additional benefit of the spherical near field test facility is the ability to perform back projections on to a given plane within the measurement sphere. A holographic back projection on to the aperture of the antenna highlights material defects that might affect antenna performance, and enables them to be resolved at the design stage. It is possible to determine the affects of coupling within a circuit that may cause amplitude, phase corruption within an array or if there is unwanted radiation off the feed circuit.

X-Y Spreadsheet

Environmental Testing Capabilities

- Vibration
- Shock – gravity
- Bounce
- Bench handling – impact
- Life testing
- Centrifugal
- Seismic
- Temperature
- Humidity
- Altitude
- Ingress
- Sand and dust
- Salt corrosion
- Susceptibility to fluids
- Sunlight
