Genesis™

Enhanced communications
Improved staff & customer safety
Increased control

Staff and customer protection is a key issue for every organisation. Genesis takes staff and client protection to a new level by integrating all alarms into one system and ensuring that staff are always in contact. Genesis can automatically alert relevant staff to emergencies, for instance fire or mechanical breakdown, and warn security personnel about issues such as unauthorised access.

Genesis also protects lone workers, night workers and those in hazardous environments. It can integrate with personal alarms, offer position location and alert staff of emergencies. Genesis delivers an extra level of protection, giving at-risk staff the confidence to do their job effectively.

Benefit immediately from:

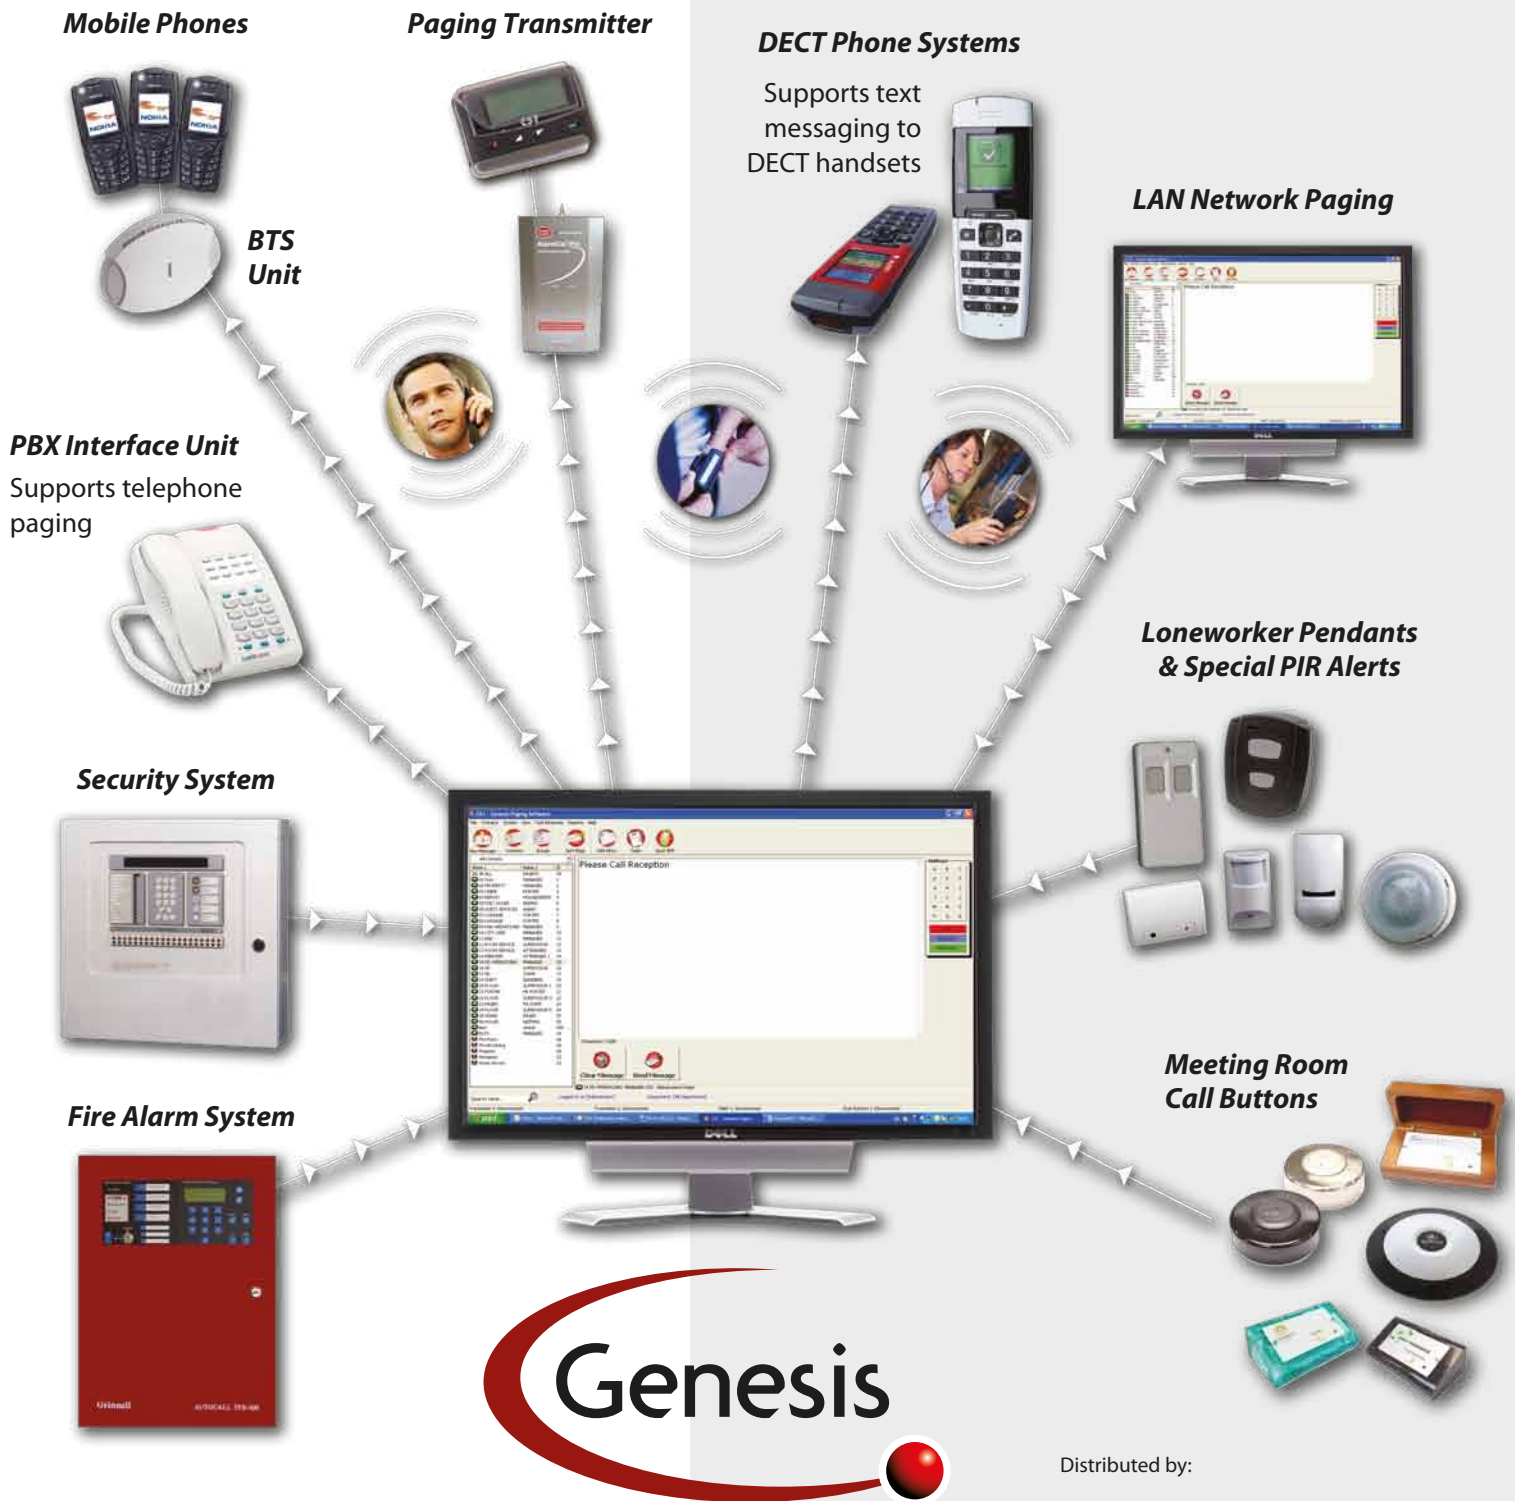

Genesis manages messaging from your equipment, controls and staff. Genesis will monitor all types of equipment and processes – alarms, safety, security, controls, environment – and automatically contact the relevant staff, on a 'need to know' basis. For example, if a refrigerator overheats, Genesis sends a message to pagers, handsets or mobiles carried by maintenance staff.

Genesis automates many 'mission critical' facilities tasks. Regular reminders can be scheduled automatically. A log of all traffic enables management to see sent messages and the response times. The wireless technology is compatible with all leading control and data transfer systems, integrating seamlessly with a huge range of third party products.

The complete, cost effective, integrated communications solution

Seamless integration for instant communication
