

TITAN FURNITURE™

PREMIUM CLASSROOM FURNITURE

“The finest range of classroom furniture in the world!”

Chairman - Titan Furniture UK Ltd.

Welcome to the Titan Furniture Range

Encouraging good posture for our children

For many years the children in our schools have been seated on a variety of Polypropylene or Wooden chairs, which are manufactured in different styles and sizes. Provided these chairs pass British Standards for strength, stability and safety they are welcomed into our classrooms.

Each manufacturer has their own agenda for their chairs. Some are manufactured to a price, some to a style and others to a best value compromise. However, few have been manufactured to a European Standard that first and foremost sets out to encourage good posture for our children.

EN 1729 Part 1 is the standard drawn up by the Technical Committee for Europe, CEN/TC207, which now sets chair dimensions, heights, angles and back support contact points for every age group - so as to encourage good posture.

Good posture not only means our children will be healthier – it also means that they should be more comfortable – and therefore more attentive in class.

EN1729 Part 1 supersedes all other standards for chairs used in our classrooms and is the standard to look for.

The Titan Chair was the first one piece Polypropylene chair to obtain EN1729 Part 1 & 2 Certification. The benefit of one piece Polypropylene chairs is well documented in terms of their longevity [15 year warranty], comfort and safety in the classroom. With no screws for practical jokers to remove, no sharp edges to cause damage, no metalwork to rust and full EN1729 Certification.

Many chairs will pass EN1729 Part 2 as this only applies to strength and replaces BS4875. The Titan conforms to Part 1 which is based on design for posture.

The Titan Chair is the only chair to offer our children and schools the best of everything.

My back would often hurt for weeks on end, and it used to wake me up during the night. I would find it uncomfortable to do anything, even sit still for long periods of time. I found myself fidgeting in lessons at school and therefore missing out key information in class. My new Titan chair resolved this!

Claire Danes, Age 13

Good Posture

To reduce the incidence and severity of low back pain when sitting a backrest with lumbar support in the correct position reduces low back stress by helping to maintain the natural 'S' shape.

Chair Size Options

Titan 1 - 1 - 2 Years

Seat height 260mm

Titan 2 - 3 - 5 Years

Seat height 310mm

Titan 3 - 5 - 7 Years

Seat height 350mm

Titan 4 - 7 - 9 Years

Seat height 380mm

1 Piece chair

Manufactured from 'high impact' polypropylene.

Superior Strength

To withstand the toughest of environments.

Anti Tilt

Unique leg system prevents children leaning back.

Classroom Safe

No sharp edges.

The Titan Chair Test Certificates!

Why buy EN1729 Part 1 & 2 Titan Chairs!

In 2006 an early day motion was tabled at the House of Commons by Paul Burstow (Member of Parliament) and has been supported by a number of MP's including Vincent Cable.

This motion increased awareness of the incidence of back pain in school children and called for changes to school furniture. "That this House expresses concern that around 10 per cent of teenagers are reporting back pain troublesome enough to visit their General Practitioner or a physical therapist with eight per cent (up to three per class) reporting some disability from recurrent or chronic symptoms; notes that these complaints are being exacerbated in no small part by ill-fitting and lowest cost furniture within schools, lack of locker space resulting in heavy load carrying and a lack of adequate exercise

during the school day; further notes that these complaints affect the performance, self-esteem and relationships and participation in school and sporting activities of these young people and, if not corrected, will often develop into longer-term back problems; further notes that much of this furniture currently used in schools, if used in the workplace, would be deemed illegal under existing health and safety legislation; and so calls upon the Government to facilitate the introduction of furniture into schools which is adjustable, can cater for the wide variation in height in a given age group and is ergonomically sound and conducive to a good sitting posture".

With the exception of the introduction of polypropylene chairs in the 1970s, there has been no significant innovation in educational furniture in the last fifty years....

....The arrival of Titan puts an end to this!

The Titan Chair Family!

Built for the toughest classroom environments!

A child will sit on a chair for up to six hours a day over a period of 11 years or more. Furniture must therefore be durable and easy to clean and repair.

Cost is always a driver and in educational environments this is particularly acute as furniture is often the last purchase in a long building or refurbishment process. All too often it is seen as low status and/or purchased as an afterthought, with the consequence that the benefits of a new school are diminished by inappropriate furniture. Based on purchase cost criteria alone, furniture can be unattractive, unergonomic and of poor design. The result is students feeling a lack of ownership over the furniture, encouraging graffiti and vandalism, and

shortening the life span. The majority of school chairs will need to last at least 10 years; therefore the cost per child for a cheap school chair can be as low as 60p per year.

Although good furniture may carry a small cost premium, can we afford to ignore the benefits of providing high quality furniture that is suitable for all users?

Today's children are part of a design conscious society and this awareness extends to the furniture they use. Good furniture indicates that the purchaser respects the children; in return they are more likely to adopt a more positive attitude which is more conducive to learning.

Titan Folding Exam Desk!

Super strong, graffiti proof examination desks!

The Titan super strong exam desks have been developed with a textured high impact injection moulded polypropylene top making them almost indestructible!

Large 600mm x 600mm working area with a 710mm working height. The tops are manufactured from a one piece recyclable injection moulded polypropylene. Exam desks can be laid out in the school hall more efficiently with less effort due to the unique 'Snapping' lock mechanism and the fact the Titan Exam Desks weigh up to 50% less than old fashioned wooden top exam desks. Extra strong oval steel frame, pen groove, folds neatly away when not in use and can be stored in the Titan Examination Trolley which has a capacity of 40 desks.

Comments From The Chairman

"For many years schools have used examination desks which feature heavy, unsightly wooden tops which are hard to clean and are easily damaged in the process of erecting and storing away. I decided to ask my team to design me an exam desk that was light, easy to erect with an almost indestructible top. I believe my team have

done exactly that and I believe the Titan exam desk is the leading exam desk available today, I can confidently give it my 10 year guarantee".

Mr P. Cook
Chairman - Titan Furniture UK Limited

Titan & The Environment!

We take environmental sustainability very seriously!

Titan Furniture recognises that concern for the environment is an integral and fundamental part of the company's corporate business strategy and, to this end, has the Operational Director responsible to oversee and implement the policy requirements and represent environmental issues.

The company is proud of its achievements in the area of environmental performance, as has been demonstrated in its manufacturing process and designs used to minimise adverse environmental impacts and its associated hazards in production, product use and disposal.
