# PROTEKTOR

S u c c e s s   i s   n o   a c c i d e n t

The value of a product is determined by its benefit for the user. We therefore always feel ourselves committed to the best solutions.

The result: PROTEKTORWERK is an innovative, forward-looking product range, and a leader in the field of construction products.

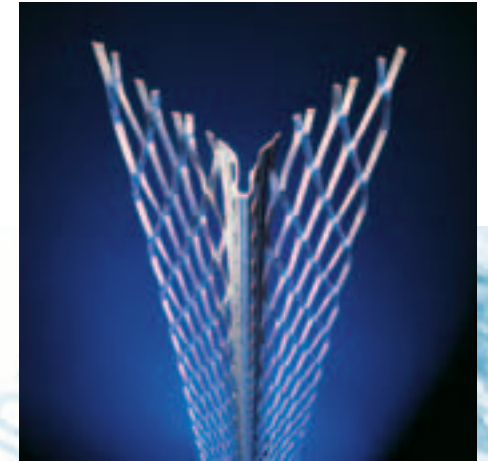

# The originals

The Florenz Maisch mechanical workshop was founded in 1903. The signs of the time had been recognised, as the business developed within a few years into a small metal goods factory with its own qualified tooling makers.

By the end of the 1920's, the first plaster profiles had been included in the product range, under the brand name "PROTEKTOR".

Today the product range covers around 400 types of the plaster profiles, over 100 different profiles for facing boards and over 500 dry lining profiles. The product range is rounded off by tiling, concrete and plaster joint profiles and gutters for roof drainage.

A company may have many faces over the course of the decades. One is the smiling face of success, which has two sides. The rational side, which shows the numbers, facts, figures and perspectives and the emotional side, which reveals the imagination and ideas, energy and style, confidence and joy.

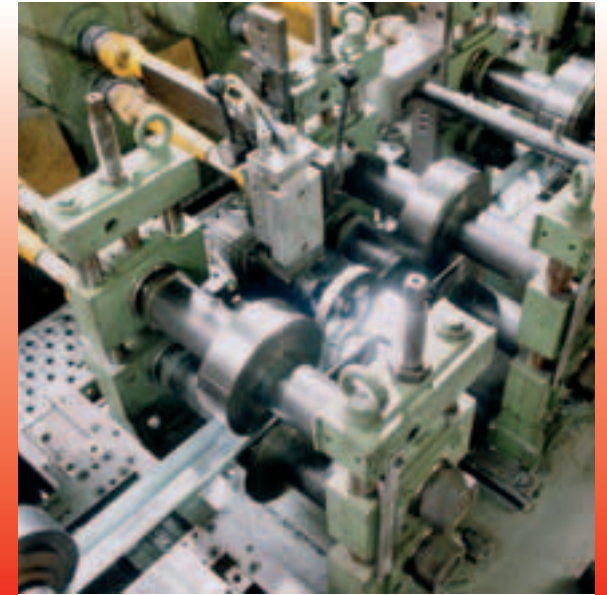

PROTEKTOR plaster profiles – easy to use guaranteed top quality.

# THE PRESENT

Committed to the best solutions

Whoever wants to move with the times cannot dispense with the continual improvement of modern construction products. PROTEKTORWERK has therefore always carried out checking, testing and research, with the declared aim of developing new technologies.

With the right quality products, success can be planned and achieved consistently.

The variety of solutions and breadth of application are the indispensable market requirements on the product. The product range has therefore been continually expanded over many years and matched to the demands of the construction market.

PROTEKTORWERK now produces over 400 different types of plaster profiles in various materials, such as heat-galvanised steel plate, aluminium, plastic and stainless steel, around 100 different profiles for facing boards and over 500 dry lining profiles. The product range is rounded off by tiling, concrete and plaster joint profiles and gutters for roof drainage.

# Innovative and durable

Production is subject to constant quality control, not only by our own laboratory, but also by recognised, independent testing institutes.

As the first manufacturer on the German market, PROTEKTORWERK has developed a complete suspension system for C-ceiling profiles, in which every type of suspension is classified in the load group for vertical tensile load to DIN 18168/2.

PROTEKTORWERK benefits from its own comprehensive distribution network within Germany and abroad, with its own branches and delivery warehouses, together with many representative offices both at home and abroad.

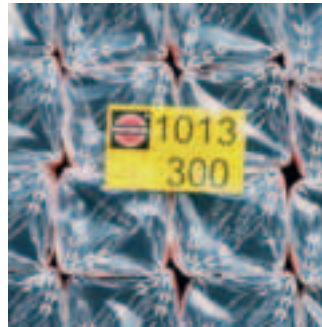

# PLASTER PROFILES

# Practical at every edge

PROTEKTOR is one of the most important European manufacturers in the field of plaster profiles.

## Easy working

Plaster profiles enable the plaster to make efficient use of modern plastering methods, guaranteeing accurate, timesaving and modern plastering work. The plaster profile range covers the application areas of interior plastering, exterior plastering, insulated plaster and thermal insulating systems.

## ... for professional edges

With its versatile product range, PROTEKTOR supplies products for a host of applications: corner beads and socle profiles, depth gauge profiles, plaster edging and expansion joint profiles, frame profiles, dry lining and special profiles ...

Over 400 different types of plaster profiles made of heat-galvanised steel plate, aluminium, stainless steel and plastic are available to cover the corresponding market segments. PROTEKTORWERK meets the needs of the trade and construction sector with a wide range of user-orientated solutions.

For further information, please request our "Plaster profiles" catalogue.

# PROFILES FOR FACING BOARDS

# Perfect fit

The processing of PVC has a long tradition at PROTEKTOR profiles for facing boards of hard PVC, aluminium and copper have been under production in Gaggenau since 1958, undergoing continual development to the very latest state of the art technology.

PROTEKTOR profiles for facing boards provide craftsman with the essential technical requirements for the neat and professional finishing of façade panels.

For further information, please request our "Profiles for facing boards" catalogue.

## Precision is essential

PROTEKTOR supplies special profiles for facing boards with or without edge covering, profiles for soffit construction, connecting and edging profiles, joint profiles, angle profiles, rain repelling profiles and ventilation profiles to DIN 4108/3 with rectangular perforation.

## Colours by request

Profiles are available in the standard colours of white, brick red, brown, black and can be supplied in any other colour according to panel samples upon request.

# DRY LINING SYSTEMS

# Supporting ideas for ceilings and partition walls

PROTEKTOR supplies complete solutions for dry lining systems. This enables accurate and professional work for either new construction or modernisation. Thanks to their flexible design possibilities, the profiles enable fast and straightforward interior partitioning.

## Designs made to measure

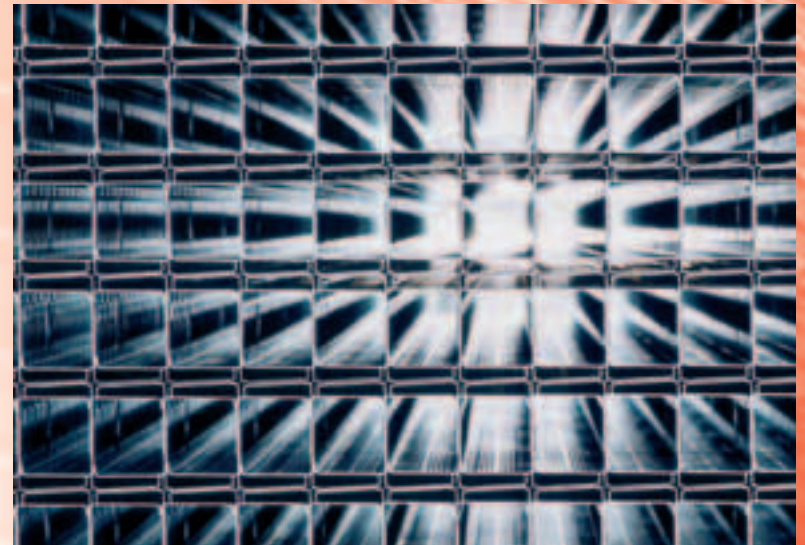

## Ingenious details

The profiles for light partitions are characterised particularly by their optimum angular stability and dimensional accuracy, profile centre marking and surface stamping for screw fittings.

A comprehensive accessory and tool range rounds off the wide range of products for dry lining.

For further information, please request our "Fixing Systems for Partitions and Suspended Ceilings" catalogue.

# GUTTERS FOR ROOF DRAINAGE

# Up to every requirement

PROTEKTOR offers the most comprehensive gutters for roof drainage on the European market. In addition to excellent product properties, the high UV resistance ensures permanently attractive colours.

## Impact-resistant under frost and heat

The successful gutters for roof drainage are made of high-quality plastic. The gutters are available in semi-circular or box form, for clampfitting or gluing, come complete with accessories, and are colourfast. Available colours are brown, grey, white, dark brown and copper. The gutters and down pipes are resistant to weather effects and usage, remaining stable, firm and impact-resistant under exposure to frost and heat. They require no maintenance or coating, and are easy to install.

Quality-orientated thinking and action govern the production and distribution of the gutters for roof drainage range. This guarantees the buyer all-round security in delivery reliability and quality to a generally acknowledged level. The components of the gutters for roof drainage offer builders, clients and architects a top-quality, durable product family.

For further information, please request our "Gutters for roof drainage" catalogue.

# TILING PROFILES

# Decorative and versatile

The PROTEKTORWERK product range also includes tiling profiles for flexible design possibilities in bathrooms, kitchens and anywhere else in the house.

Photo: Villeroy & Boch

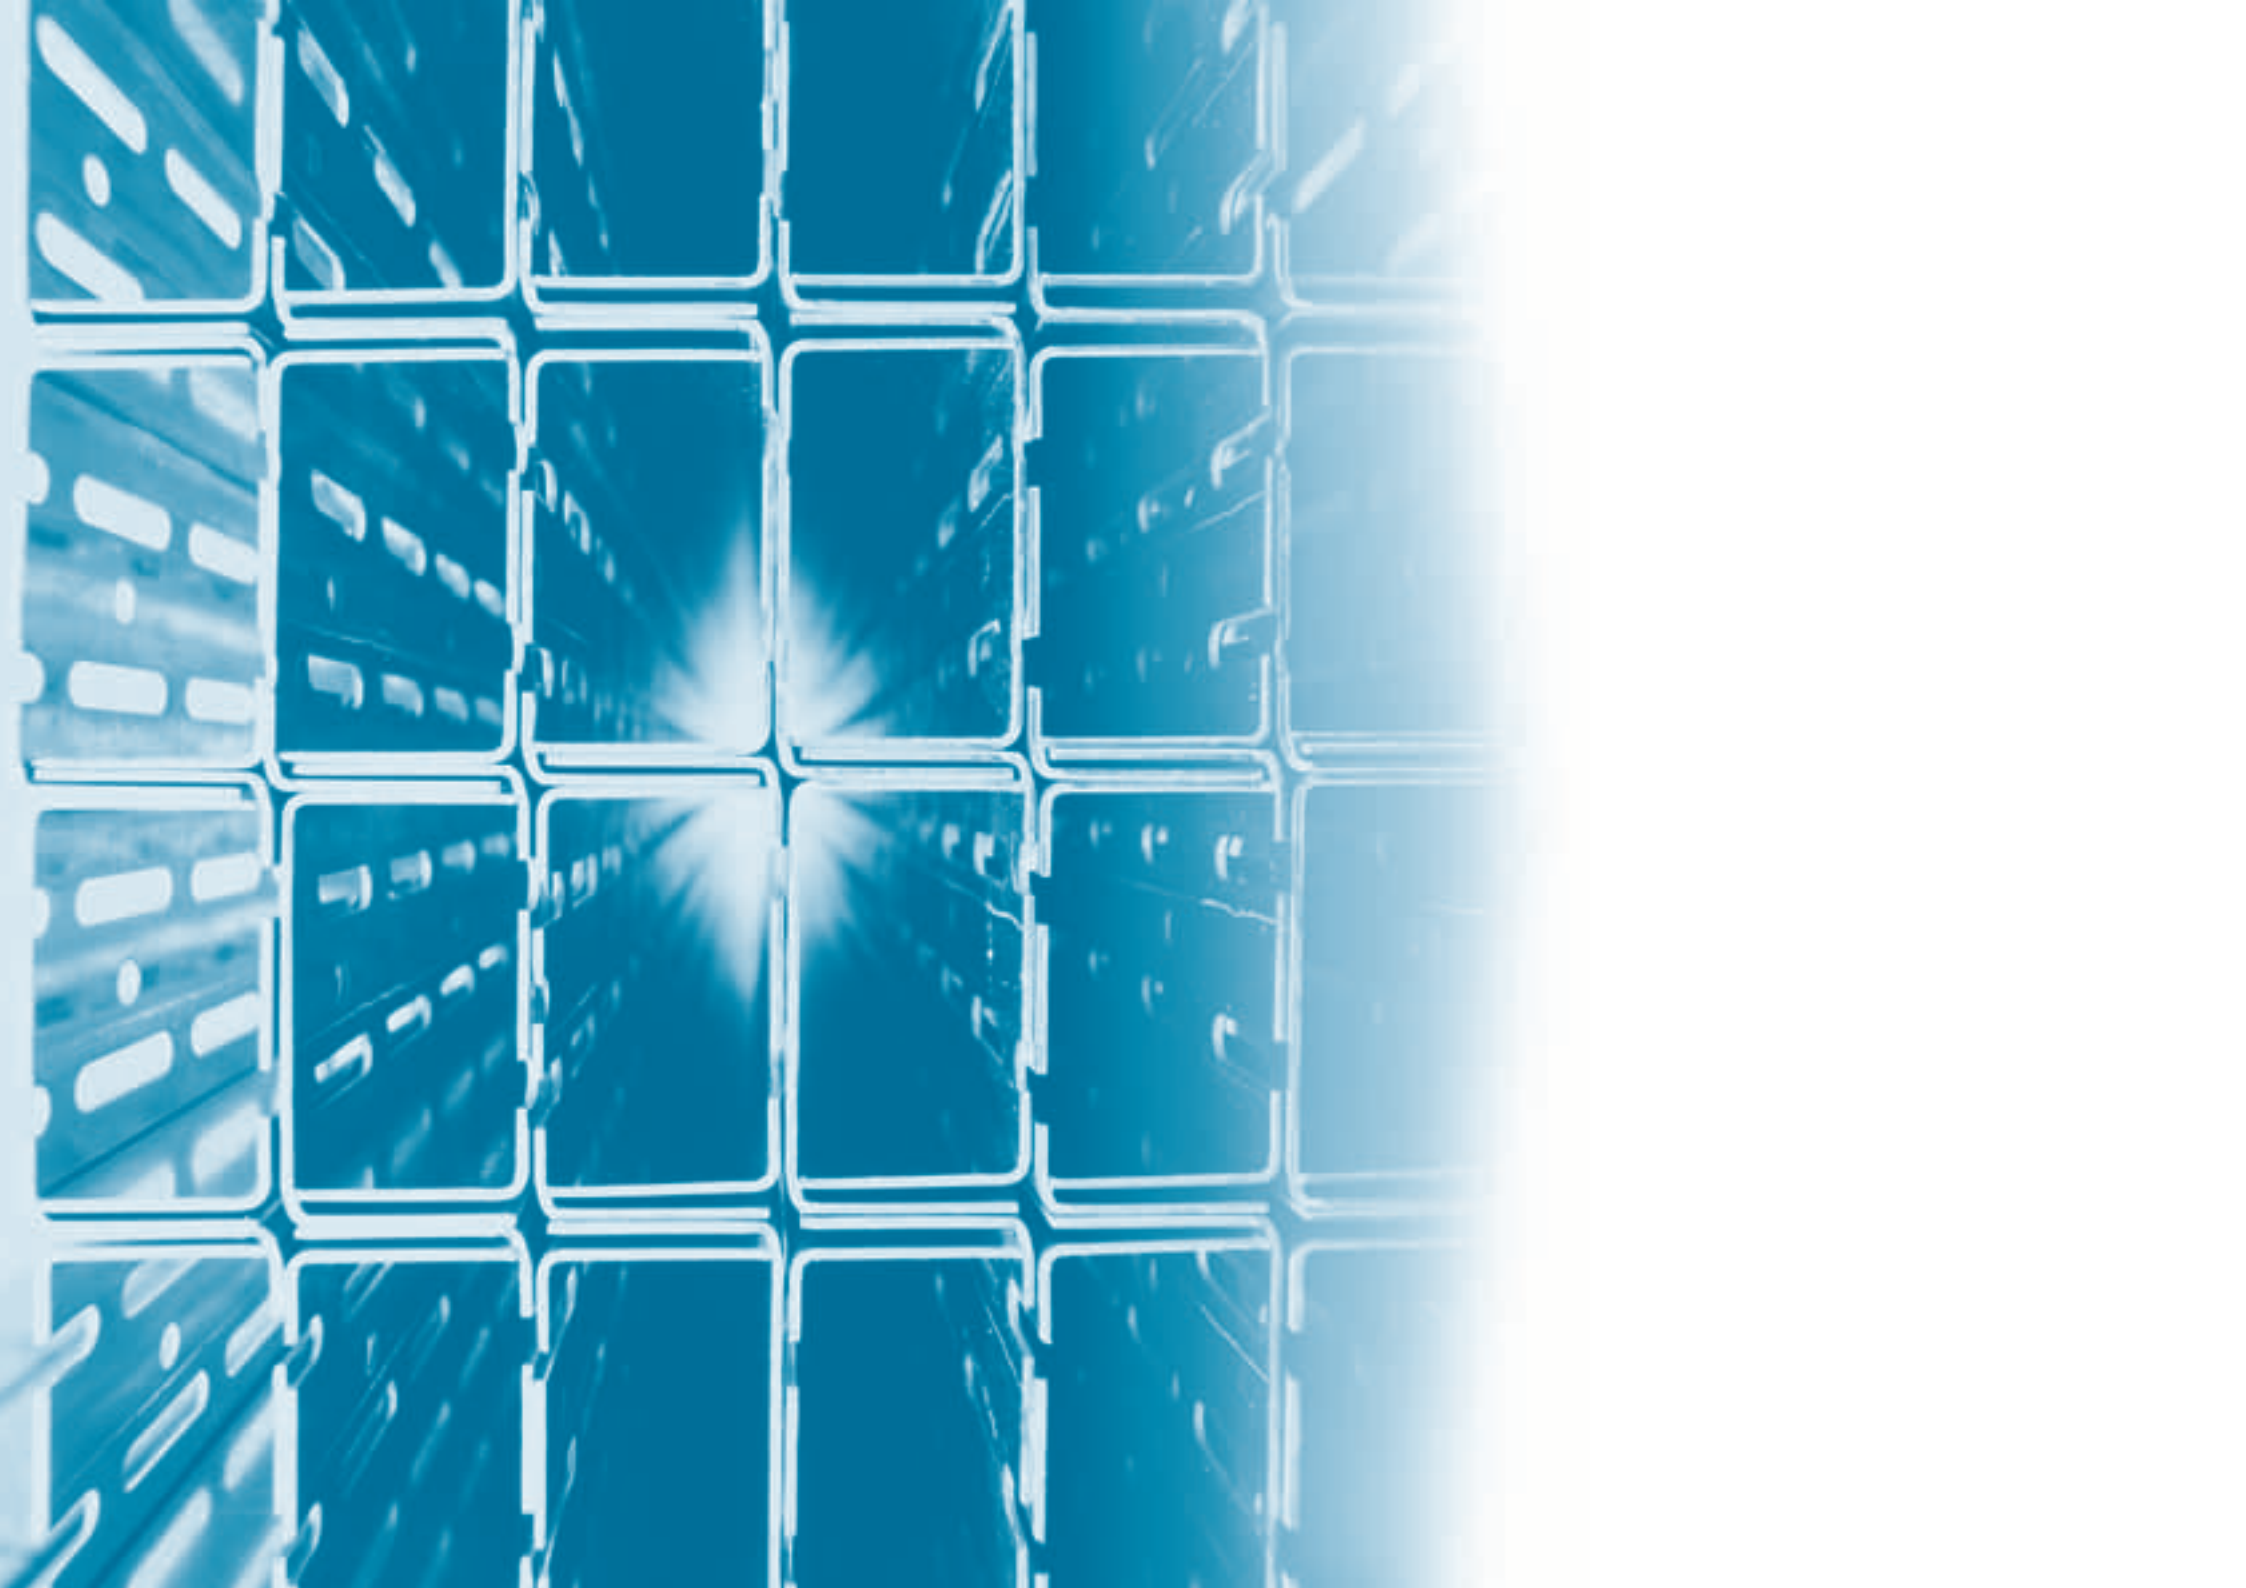

We also have the optimum profile solution for even the most difficult requirements, such as transitional areas between tiling and parquet flooring, laminate flooring or carpeting. With the Clipstech® profile, transitional areas between different floor coverings can be combined and varied without a problem. For further information, please request our "Tiling profiles" catalogue.

## They also light up at night

Safety is also an important feature of PROTEKTORWERK products.

The combination stair profile with safety inlay is available in both ribbed and smooth versions and in different colours. Effective implementation of safety is demonstrated by our combination stair profile with fluorescent safety inlay.
