Standup Tough Products for Tough Environments

Standup is a robust yet strikingly elegant range of contemporary stainless steel public realm furniture. It is specifically designed to suit the most crowded and demanding environments such as airport and railway station concourses, transport interchanges and shopping centres.

The uniquely detailed seating was recently specified and installed at Centrale Shopping Centre, Croydon and Sunderland Rail Station as part of a £12M refurbishment. The seating has also been recommended to Nexus for the reinvigoration programme of 40 metro stations and halts.

Despite its toughness, the design is one of sculptured refinement, with no visible welds. The satin polished framework contrasts with the bead blasted perforated panels and the curved and flat sections are blended seamlessly.

The bollard, cycle stand and litterbin products are all designed around the principles of the seat and bench and will complement them in any public area regeneration.

Standup stainless steel products offer an indeterminable life span with resistance to vandalism and graffiti. A one off investment in public realm regeneration offering substantial long term cost savings over alternative materials.
