

FlowMeter

FlowMeter

The BeerTech MkIII flow meter system incorporates high resolution flow sensors connected to two micro controller based hardware units.

This allows for up to 18 beverage flow lines to be monitored and the data instantly processed and stored.

Sender Unit:-

Located in a central location in cellar close to mains power supply
Supplied with power from mains supply via D.C. adaptor
Can accept up to 18 flow sensors
Single output cable supplies data and power to display unit

Display Unit:-

Located in convenient location within building
LCD display shows date, time and totals as well as user interface
Receives data from sender unit, processes and stores it
On-board memory card reader/writer

The data stored on the memory card can be read on a shift, day, weekly, monthly or even yearly basis

Counters can be reset every shift / barrel / day / month, etc

Memory card is read using excel or similar where data can be viewed. Further processing can be done within spreadsheet

Secure entry to the system by means of 4 digit password

Individual calibration of all 18 sensors

Ability to pause system to allow line cleaning without affecting beer usage totals

Email data to other location for examination
