

DiamondPolar™

Reshaping the Way You Think About Hand-Pieces

Designed for Comfort. Engineered for Results.

- ▼ *Unique Diamond Shape Ideal for Hard to Reach Areas*
- ▼ *Ergonomic Pen Shaped Design for Operator Comfort*
- ▼ *Visible Electrodes Allow Precise Control During Treatment*
- ▼ *Quick and Homogeneous Heating of the Treatment Area*
- ▼ *No Consumables or Hidden Costs*

VENUSCONCEPT

Seeing is believing! Come experience the DiamondPolar™ advantage, and see the immediate results that can be achieved with a pleasurable massage-like spa treatment.

Ergonomic Design The DiamondPolar™ hand-piece is designed for hard to reach areas with precise control. DiamondPolar™ has the highest facial coverage ratio in the industry, and its pen-like shape and visible electrodes allow for a more intuitive easy to control treatment.

Enhanced Energy Matrix 4 (MP)² electrodes guarantee homogenous distribution of energy, for fast and uniform heating from the inside out, without the risk of temperature spikes or burns. DiamondPolar™ utilizes a unique algorithm to ensure a three dimensional treatment across all the skin layers.

Easily Reach and Maintain Endpoint Powered by an enhanced energy matrix, DiamondPolar™ reaches the ideal skin temperature for aesthetic treatments, known as "endpoint", significantly faster than other technologies. Once reaching "endpoint" DiamondPolar™ easily maintains the temperature over the treated area for excellent results.

No Hidden Costs In today's economy ongoing costs such as consumables and maintenance fees are becoming a factor in the purchase decision of an aesthetic device. DiamondPolar™ is based on technologies that have an inherently unlimited lifespan, there are no parts that need regular replacement and no consumables for significantly better ROI.
