

OctiPolar™

A New Standard in Hand-Piece Technology

Designed for Comfort. Engineered for Results.

- ✔ *Quick and homogeneous heating of the treatment area*
- ✔ *The first pleasurable aesthetic treatment*
- ✔ *Easily maintains endpoint temperature for better results*
- ✔ *8 (MP)²® electrodes optimize safety and penetration depth*
- ✔ *No consumables or hidden costs*

VENUSCONCEPT

Seeing is believing! Come experience the OctiPolar™ advantage, and see the immediate results that can be achieved with a pleasurable massage-like spa treatment.

Ergonomic Design Designed with both you and your clients comfort in mind, the OctiPolar™ mouse shaped hand piece sits comfortably in the palm of your hand. By bringing your hand down to the level of the skin OctiPolar™ offers you a better sense of skin topography, so you can glide naturally along body contours, giving your clients a massage-like treatment sensation.

Enhanced Energy Matrix With over 150W of combined power, 8 (MP)² electrodes guarantee homogenous distribution of energy, for fast and uniform heating from the inside out, without the risk of temperature spikes or burns. OctiPolar™ utilizes a unique algorithm to ensure a three dimensional treatment across all the skin layers.

Extra-Large Treatment Area With a total treatment area of 23cm², OctiPolar™ has the largest treatment area in the industry, for comprehensive coverage up to 4 times faster. So you can schedule more treatments in less time.

Easily Reach and Maintain Endpoint Powered by an enhanced energy matrix, OctiPolar™ reaches the ideal skin temperature for aesthetic treatments, known as "endpoint", significantly faster than other technologies. Once reaching "endpoint" OctiPolar™ easily maintains the temperature over the treated area for excellent results.

No Hidden Costs In today's economy ongoing costs such as consumables and maintenance fees are becoming a factor in the purchase decision of an aesthetic device. OctiPolar™ is based on technologies that have an inherently unlimited lifespan, there are no parts that need regular replacement and no consumables for significantly better ROI.
