

NEW EQUIPMENT, MODERNISATION AND MAINTENANCE SOLUTIONS

Shutters & Grilles

KONE Roller Shutters & Grilles

KONE's range of shutters and grilles covers all building types and provides customers with a flexible choice of solutions to match the most demanding of environments. They are designed and manufactured to last and provide robust entrance solutions for building access and security. All KONE shutters and grilles can be supplied in either manual or powered operation as stand alone solutions or with options for full integration within an automated building entrance system.

Industrial roller shutters

All KONE industrial shutters and grilles are designed and manufactured specifically for the environment and location they are intended for.

Customers can choose from a range of finishes. The shutter can be constructed in galvanised steel to ensure maximum environmental protection. If required the shutter can be powder coated to suit the facade of the building to a range of RAL or BS colours.

For environments where security is a primary issue KONE anti-cut industrial doors are ideal, they will prevent quick entry into the building from people using powered cutting tools.

KONE industrial shutters are ideal for openings where space is limited; they are supported by wall side piers removing the need for additional structural support.

All KONE shutters are designed with safety in mind and safety brakes are standard on all powered shutters.

Multi-purpose roller shutters

Manufactured using either galvanised or powder coated steel or extruded aluminium, KONE's multi-purpose shutters can be provided with a shop window option (see through section).

To assist with opening and closing, self-coiling and hand chain roller shutters are fitted with counter balance systems that aid operation during use.

Fire resistant roller shutters

KONE's range of fully approved and certified automatic fire shutters have a resistance rating of up to 4 hours and are suitable for external or internal openings. All of KONE's fire resistant roller shutters can be integrated within a building's own fire prevention system or specified as stand alone units.

Insulated roller shutters

KONE insulated shutters are ideal for environments where energy conservation and transfer of heat through the entrance is of importance.

The shutter panel is manufactured using high density insulation enclosed within a steel skin, combined with the frame the shutter provides an ideal strong and robust entrance solution. A range of finishes and options for manual or power opening, running on either single or three phase supplies, are available.

KONE insulated shutters also help lower sound transmission and can be supplied to bespoke requirements. All KONE powered shutters are provided with safety brakes.

KONE roller shutters are manufactured to incorporate the safety requirements set out in BS EN 13241-1:2003.

Internal & external grilles

Folding and retractable grilles are ideal for external and internal applications to protect unauthorised entrance through window and door openings.

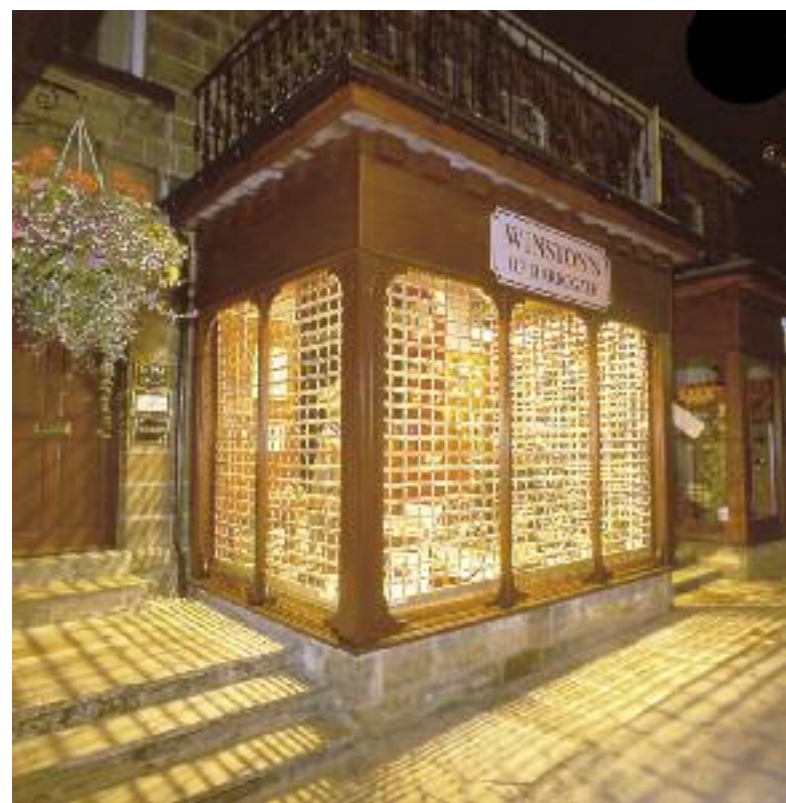

Manufactured using powder coated extruded aluminium the grille is robust, easy to use and low in maintenance. Grilles can be supplied in a wide range of sizes suitable for most door and window openings, bespoke options are available if required.

KONE grilles can be supplied to standard opening dimensions or bespoke specifications, options for slam lock and quick release to assist emergency opening are also available.

KONE insurance approved products are manufactured to the standard LPS 1175.

Quality, maintenance, repairs & service

When you choose a KONE product solution you are assured that quality, durability and safety are inbuilt in its production, irrespective of manufacturing source. Invariably KONE shutters and grilles are installed into locations where heavy usage is normal. As a result the equipment will require skilled routine maintenance and occasional repairs, to support this need KONE has a range of tailored maintenance solutions for your business.

KONE provides innovative and eco-efficient solutions for loading bays and access, doors, elevators and escalators. We support our customers every step of the way; from design, manufacturing and installation to maintenance and modernisation. KONE is a global leader in helping our customers manage the smooth flow of people and goods throughout their buildings.

Our commitment to customers is present in all KONE solutions. This makes us a reliable partner throughout the life-cycle of the building. We challenge the conventional wisdom of the industry. We are fast, flexible, and we have a well-deserved reputation as a technology leader, with such innovations as KONE UniDrive™, KONE MonoSpace®, KONE MaxiSpace™, and KONE InnoTrack™. You can experience these innovations in architectural landmarks such as the Trump Tower in Chicago, the 30 St Mary Axe building in London, Schiphol Airport in Amsterdam and the Beijing National Grand Theatre in China.

KONE employs over 30,000 dedicated experts to serve you globally and locally in 49 countries.
