## Easypack packing stations

These space saving Easypack systems produce resilient cushions of paper packaging material directly through the work table for immediate take up by the packer. The Easypack machine delivers strong, flexible and readily moulded cushions, providing effective protection and void fill, to hold and cocoon goods in the outer box and prevent damage during transit.

Environmentally friendly paper is made from 100% recycled material and can be supplied in natural brown or clean white colours. Different grades are produced for packing goods of all shapes, size and weight. After use, the cushions are recyclable and biodegradable.

Single packing station

Void fill and protection

## Efficient use of space

The machine is neatly tucked away beneath the working table top allowing maximum utilisation of floor space in warehouse and packing areas. The cushion projects through the work-table and in semi-automatic mode rapidly generates a new pack every time one is taken up.

Cushion length is selected by means of a simple dial switch. Alternatively, a foot operated switch can be used allowing the packer full control over individual pack lengths. The machine runs until the foot switch is released and then cleanly cuts off the cushion ready for use.

100% RECYCLED PAPER

## Ergonomical

Benches have been designed with a table length of 2m to provide a sizeable working area and are adjustable in height from 810m to 1010m to give an ergonomical and comfortable table to suit any situation.

The attractive benches are of high quality welded steel construction with hardwearing laminate worktops and frames powder coated in durable colours.

An overhead storage shelf is available with seven dividers to store collapsed boxes within easy reach of the packer.

## Double packing station

The wider 1.2m double packing station allows two operators to work on opposite sides of the bench and take up material from a single machine. Cushion delivery and length is controlled by packers each having their own foot switch.
