

Services

Concept and Design.

We work from the brief provided by our clients and provide our input based on the nature of the project.

Where a concept and performance specification is provided we consider what materials and processes would be most suitable and prepare a draft specification, outline drawings and sample materials for approval. Once these are initially approved we can put together budget proposals and an implementation plan.

Prototyping takes place in our factory, which can then be installed for inspection either locally, or at a preferred location off site.

If there is a compliant specification we will work on costings and confirm processes before submitting our proposal, prices and prototypes.

We carry out all installation using our own employed crews who are fully approved and certificated (PASMA, IPAF, etc)

Our drawing office works on the latest CAD software and our graphics studio is equipped with the latest creative suites for design and production.
