

## Why choose a Playrite surface?

Trusted UK  
Manufacturer

- Projects featuring Playrite can be seen worldwide
- Continual investment into research and development
- Sport specific surfaces accredited by major sports governing bodies
- Total control over production ensures superior surfaces with a fast turnaround
- Only UK manufacturer to offer a choice of needlepunch, tufted or woven surfaces

## Who we are, what we stand for

Established for  
over 20 years

Playrite have been established for over 20 years and are the only manufacturer in the UK to make woven, tufted and needlepunch artificial surfaces for sport, leisure and play. We are experts in what we do and are known for our innovation and this is reflected in the products we produce and our corporate values. We have a genuine interest in local community and aspire to improve both venue and functionality for all projects we work on - Playrite are prepared to go that extra mile to ensure our customers transform their facilities to further benefit society and the environment.

# The only UK manufacturer to offer real choice

Needlepunch, tufted or woven? Different manufacturing processes provide their own individual qualities and are suited to a range of different applications.

## Needlepunch

Durable and hardwearing, needlepunch surfaces are created by layering staple polypropylene fibres to the required weight, then needling them to the correct density. Suitable for indoor use, though predominately installed outdoors, needlepunch products can be sand dressed or sand filled.

Suitable for multi use games areas, tennis courts, practice cricket areas, bowling greens, golf pathways, tee areas and playground safety surfaces.

## Tufted

Created using a preformed primary backing cloth which is then pierced by hundreds of needles that push the yarn through the backing to create a loop to the desired pile height. This is then cut with a blade and then latex backing is applied.

Suitable for 3G football pitches, multi use games areas and tennis courts as well as artificial grass for gardens.

## Woven

Manufactured by interlacing two sets of threads at right angles, the pile is trapped around these threads in a 'u' or a 'j' shape creating a high degree of integral strength. Tuft density can be varied to suit specific requirements and woven products can be used as pure textile or sand dressed depending on usage.

Suitable for cricket wickets and surfaces and bowling green's

## Our product range

A diverse range of surfaces manufactured with different yarns, fibres and processes have been proven time and time again over the past 20 years in the sport, play and leisure industries.
