## Installation Instructions

Please look over the enclosed drawings to familiarise yourself with the parts required to construct your cubicle. Check that the sizes you have provided for manufacture are correct and match the sizes on site.

### Installing The Partitions

**Please Note:** We no longer pre-drill the partitions as Soil Stacks and Window Placements can compromise the fitting position. Normally our Cubicles are divided equally along the wallspace except where Ambulant or Disabled Cubicles are to be implemented.

#### Step 1

Fix the partition channel brackets to the rear wall using 35x4mm posi screws and red plugs.

#### Step 2

The partitions should be set up 135mm off the floor on the adjustable leg provided. Tighten the Allen Head Clamp down securely on the partition.

#### Step 3

Next check the squareness of the partition and then fix the height adjustable leg to the floor with 35x4mm posi screws and red plugs, (please ensure before drilling that no under floor heating is present).

### Installing Pilasters

#### Step 4

Start by installing an end pilasters back to the wall on the brackets provided, using 35x4mm posi screws and red plugs.

Set the pilaster height 135mm up from the floor to match the partition height and tighten the T-Nuts down securely on the pilaster.

Fit the channel brackets centrally to the back of the centre pilaster, pilot the holes 10mm deep and fix with resistorx 12x4 screws.

Fit the pilaster by bolting through with the T-Nuts provided. Tighten securely with an Allen Key.

### Check Measurements

Next, measure the door aperture; it should measure 35mm less than the overall width of the door. If this matches, you can continue on, installing the remaining centre pilasters, again checking the aperture and measurements as you go.

# Installation Instructions

Please look over the enclosed drawings to familiarise yourself with the parts required to construct your cubicle. Check that the sizes you have provided for manufacture are correct and match the sizes on site.

## Fit The Channel Headrail

### Step 7

The Channel headrail is what braces the whole cubicle construction, so correct fitment of this item is essential. Start by cutting the headrail to the correct length. Next, fit the rail over the pilaster.

Pre-drill the pilasters through the top of the headrail and affix 3 12x4mm screws into the top of each pilaster bracing the construction.

## Fitting The Doors And Lock Keeps

### Step 8

The doors provided should overlap the aperture by 35mm. The door should now be fitted ensuring an equal overlap of 17.5mm on either side of the pilaster/aperture.

Use the 12x4mm Resistorx screws piloted to a depth of 10mm to fit the hinges and 12x4 screws piloted to 10mm deep to fit the lock back plate assembly. Next fit the lock keep on the pilaster with 12x4mm Resistorx screws.

**Please Note:** The nylon cams in the hinges can be adjusted to allow the door to swing open or closed. To change the operation of the closure, remove the nylon cam and turn in through 90 degrees. The locks are also symmetrical and can be used on either side of the door.

## Accessories

### Step 9

Fit the hat, coat hook and toilet roll holders at the desired height using the 12x4mm Resistorx screws piloted to 10mm depth.

**Please Note:** We do provide T-Nuts so the hinges and pilaster can be bolted through. This is sometimes a more robust solution when vandalism is prevalent, though standard construction is aesthetically more pleasing to look at than the bolt through option.
