Gridforce

Ground reinforcement

Gridforce offers a tile system made from 100% recycled plastic, that provides ground reinforcement for various surfaces. The tiles can be used for temporary or permanent reinforcement, and provide a firm surface that will not sink, rut or shift once installed.

They are cost-effective compared to concrete or paved surfaces.

• Applications

Applications range from large industrial hardstandings covering thousands of square metres to small domestic driveways.

Soft landscape applications include lawn reinforcement, slope reinforcement, events grounds, caravan sites, golf courses, equestrian centres and general ground stabilisation.

Hard landscape applications include parking areas, SUDS, airports, helipads and construction sites.

Sitework

Their interlocking design means that they are extremely easy to install. The tough grids are laid above or below the ground level, and filled with stone or earth, or can be seeded.

Gridforce tiles are suitable for permanent or temporary parking applications

Public park, six months after installation – www.gridforce.co.uk

Grassed verge – www.gridforce.co.uk

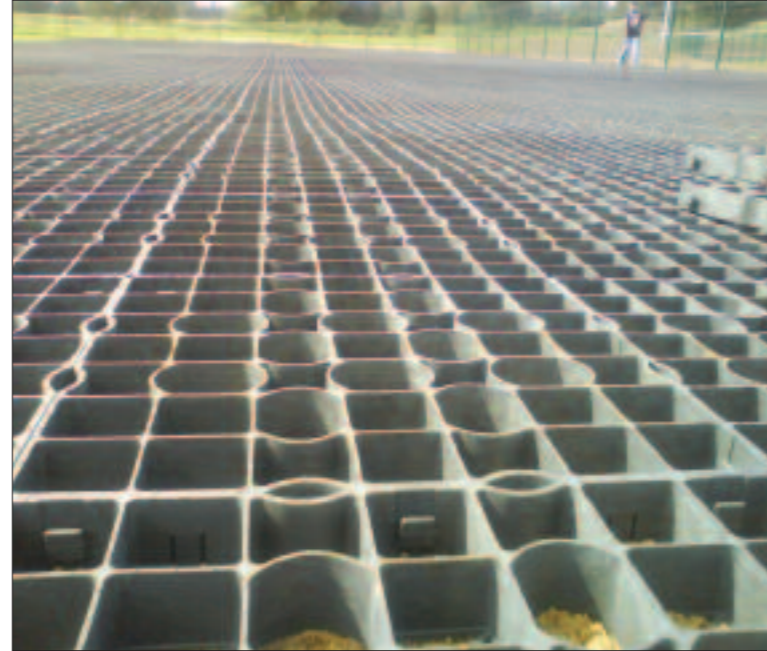

Parking area with Gridforce tiles filled with aggregate – www.gridforce.co.uk

Interlocking tiles can be seeded

Gridforce tiles are easy to install

Gridforce tiles can be used to reinforce large areas

Applications include slope stabilisation

Golf course application

Gridforce tiles provide a firm, stable surface – www.gridforce.co.uk

Large parking area under construction – www.gridforce.co.uk
