## Facial & Text CCTV Test Target

Complies with HOSDB Guidelines

### Features and Benefits

Facial Test Charts

Weather-proof

Comprehensive Instructions

Hard and soft copy data records

Complies with HOSDB Guidance

Self-supporting Mono-pod

Carry Case

Free telephone support

The HOSDB are launching a new test target to comply with the latest edition of their CCTV Operational Requirements document. This is of benefit to users, installers and manufacturers in evaluating the image quality of CCTV systems. The test is simple to conduct and designed to allow systems to be tested specifically on their ability to provide useful facial and text imagery.

ClearView have developed a kit of all components needed to test the facial and text imagery capabilities of live and recorded CCTV systems in keeping with the new Home Office Guidance.

The system comprises:

2 sets of high quality colour A4 facial images on non-reflective transparent laminate (to protect from the elements) with easy chart change system.

Carry case for all equipment.

9 text charts in accordance with HOSDB guidelines with easy chart change system.

Sturdy stand to support facial and text charts and to provide correct horizontal camera height dimension.

Formatted record forms to enter test results.

Software spreadsheet to facilitate collation and calculation of test results.
