

SecureSmart

A more intelligent approach to your security

*A complex threat requires
a smarter response.*

Your organisation operates in a constantly changing security landscape, with ever more sophisticated threats presenting an increasingly hostile challenge. OCS has developed a more intelligent security solution, designed to provide you with more advanced, effective and integrated defences.

Brought to you by OCS, proud holders of 'Gold Company' status with the National Security Inspectorate and winners of the prestigious BSIA 'Best Use of Technology' award, SecureSmart is a joined up way of thinking about your security.

Using specially developed processes, and drawing on more than 30 years of experience, it brings together the most advanced systems, the best people and the latest technology to create a complete package of seamless protection, precisely targeted at the specific threats facing your business.

SecureSmart is a genuinely integrated solution which offers you bespoke, 360° security, while eliminating waste and safeguarding your business against unnecessary expenditure. And because SecureSmart is built on a robust planning model, it offers your organisation a higher level of protection.

Using specially developed processes, and drawing on more than 30 years of experience, it brings together the most advanced systems, the best people and the latest technology to create a complete package of seamless protection, precisely targeted at the specific threats facing your business.

A unique process, for your unique security challenges

Stage 1

Seek knowledge

We undertake a complete review of the client's current security arrangements and day-to-day operations in order to gain an understanding of all the key issues. This is combined with detailed site visits and security 'walk through' in order to develop a framework for full risk analysis.

Stage 2

Evaluate risk

Data gathered at stage one is analysed to evaluate and prioritise risks. Highlighted areas of risk and potential system weakness are probed in depth, and additional supporting information is gathered to enhance understanding and verify risk priorities.

Stage 3

Consider solution

Using the knowledge gathering and risk analysis carried out at stages one and two, a security overview is produced, providing 'headline' findings and recommendations in relation to the client's strategic goals. This comprehensive report also details the key risks identified, the potential risk consequences, current solution and potential solutions development pathways.

Stage 4

Understand cost benefit

Pathways are modelled, the optimum balance of component security services is defined and 'greenfield' pricing is applied. This enables budget comparisons and a full understanding of potential cost benefits.

Stage 5

Re-engineer design

Detailed analysis of the proposed model and projected return on investment identifies opportunities for further system efficiencies. Fine tuning or re-engineering of the model is actioned, before approval and implementation.

Stage 6

Ensure value

Ongoing review and improvement is fundamental to *SecureSmart*. Actual performance is measured against the projections, with variances identified and remodelling and refinement taking place on the basis of new or changing factors. In particular, *SecureSmart* solutions are continually upgraded as new technology becomes available, to ensure the best possible security and maximum value for clients.

Secure*Smart* solutions draw on each of our self-delivered specialist security services that when combined, provide maximum protection and maximum efficiency.

Security Guarding

Often a key part of Secure*Smart* solutions, security guarding is delivered through a national network of rigorously screened and highly trained security officers, operating to BS7984. Every member of staff is given detailed, site specific training and we can also provide professional officers for customer facing, front-of-house duties.

Specialist Security Services

Through Secure*Smart*, at OCS we provide a range of industry-specific specialist security services for a wide range of business sectors. Chief amongst these are Loss Prevention, Audit and Asset Tracking using specialist teams to safeguard against specific threats within the supply chain and the wider retail environment.

Security Systems

Our team of highly-qualified engineers design, install and maintain the latest security systems, including advanced CCTV, access management, intruder detection and integrated systems. All can be linked through one interface, so enabling assets and personnel to be closely monitored 24 hours a day, under the watchful eye of our 24 hour Remote Monitoring Centre.

Confidential Waste Management

Designed to combat an increasingly severe threat to business, our confidential waste management service employs rigorous protocols to collect, transport, securely recycle or dispose of your confidential waste, ensuring that sensitive material will always remain completely confidential.

For a truly effective security solution, investigate **SecureSmart** today, and take the first step towards a higher level of protection for your business.

Smart thinking, Smart solutions, Smart security.
