

See the light and save money!

Leave the Dark Ages behind

From this 1320 watts

To this 450 watts !!

Can you see why leading companies are changing to LED Industrial lighting?

- Clean, bright light!
- Reduce energy usage by at least 66% (more with PIR/LUX sensors)
- Guaranteed for 5 years, and warrantied to produce at least 80% of its original brightness for 60,000 hours (over 10 years in most instances)
- NO maintenance bills for the life of your lights - NONE, as in Zero!
- Produce much less heat (great if you run a refrigerated warehouse!)
- CE approved, IP66 rated, Dark Sky approved
- ATEX versions available - and typically **cheaper** than traditional ATEX lights!
- Help meet your CRC commitments

LED lighting reduces your costs and provides a safer, healthier environment for your staff

Interior Control Ltd is the UK distributor for Dialight - a company with over 30 years in the LED Lighting industry, a UK manufacturer with a £100m+ turnover.

Whilst Interior Control Ltd supply various LED lighting solutions, one of our key product ranges is that of Dialight. LED High Bay, LED Low Bay, LED Bulkhead and LED Area lights and LED ATEX lighting solutions - all with IP66 ratings and 5 year guarantees.

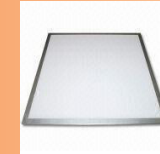

This range also includes the ATEX SafeSite® series of lights is ideal for hazardous environments - and are generally CHEAPER than their non-LED equivalents!

We are also proud to supply the Steinel range of LED floodlights and PIR/LUX sensors

Consider your business's future - look at a zero maintenance solution that saves you money for many years

Diamond light from Interior Control - LED Lighting for your business

Take a look at what we provide so that you save money....

- LED High Bay lights

Save money see the light

Today's business leader

The key challenges faced by business leaders in the current economic climate are:

- Reducing costs
- Reducing overheads
- Enabling staff to work more efficiently

LED lighting delivers on each of these:

- They dramatically reduce your energy usage by 66%.
- They require NO maintenance.
- Your staff are able to work better and more safely because they can 'see' better.

Our clients know this and they have decided to do something about the problem. They spent money now and are **DRAMATICALLY** reducing their costs for at least the next 10 years!

A picture paints a thousand words.....

Just take a look at the simple graph to the right. It is based on a warehouse with just 100 high bay lights, working for 18 hours a day, 365 days a year and paying 8.5p per kWh.

In 10 years (the expected life of the lights)

- You save over £250,000 in energy costs.
- You spent **NOTHING** on maintenance
- You have improved the environment for your staff
- Each light you bought saved you £2,500
- Each light saved 9.7 tonnes of carbon

Now you have seen the light give us a call.

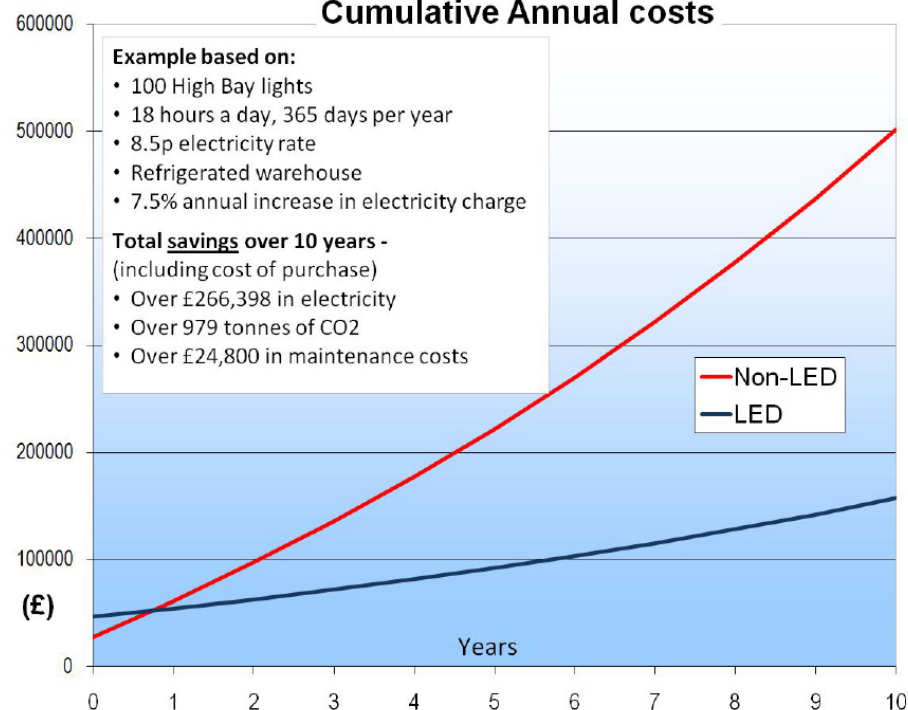

So, do you need to increase your bottom line without a single extra sale? Call us today to see how much you could improve your profitability.

If you are involved in the following - then you **REALLY** need to call us...

- Refrigerated Transport
- Refrigerated Warehousing
- Hazardous environments
- Food Production
- Injection Moulding
- Shipping and Ports

For your business
For your profit
For your peace of mind
For your staff
For the future of the planet
For your green credentials

Cumulative Annual costs

I don't think he can see the light either. That's the problem with moles, they just don't get it.

But we think you do..... you understand that it's not just the cost of purchase that has to be considered - it's the running costs, the maintenance, the improvement to conditions in your building. So, if you take a moment to consider all of the arguments, I hope you'll be able to see what other leading companies are seeing - a whole new light.

We can't help the rest of your business but the one thing we can do is shield you from the dramatically increasing cost of electricity. This year there have been upwards of 15% electricity price rises - and more are planned.

Upgrade to LED lighting, then you save:

- a) The cost of energy for lighting
- b) The increases on the energy you just saved
- c) The cost of maintaining your lights

This all increases your bottom line !
