

Seap-Approved Cages

Seap- Approved Cages..

As far as we are aware there is no such thing, well not on the face of it. What we can offer is our product infilled with Expanded metal of Securilath standard, we then compli-

ment this with an approved lock for example such as a Manifoil Mk. 4 with a Medway Locking system. This combined with a specially strengthened door with a three point lock. Any action such as a Sledge Hammer explodes the integral plate which renders the lock inoperative.

We offer the total service:- design, survey, manufacture, & installation. Combination rescue, changing of combination and regular service, maintenance.

We naturally cannot take specific location photographs, but due to our good relationships with our customers at these locations and subject to vetting by our customer it is possible we could arrange site visits.

Often these locations are connected with server security and Military applications.

Depicted right the shroud covers the emergency exit handle so that egress is possible. (entire shroud not shown to protect design)

Call us in for a site survey that is normally free, depending on location and urgency.
