

Manufacturing Mezzanine

June Case Study

Products used: Flowshield LXP

FeRFA type: 5

Area: 400 m2 Production Mezzanine

Central Flooring Services have just completed a 400m2 flexible polyurethane self-smoother project for a manufacturer of skin care products in Derbyshire.

The specification called for the over boarding of steel beams with timber followed by the installation of a coved skirting, Flowshield LXP self-smoother and a clear matt coating to leave a completely seamless and durable finish.

The completed project was handed back on time with a completely satisfied client.
