# How Would You Like Your Surfaces To Look?

No protection can cause additional expense and time consuming damage and cleaning requirements

Film on rolls lose adhesion and may need replacing every 4-6 weeks. Making your surfaces vulnerable to damage

Protective board is time consuming to apply and can trap debris underneath, causing delays and additional cleaning

Protectapeel is quickly applied by airless spray or roller and does not lose adhesion, providing 12 months of superior protection. When removed it reveals clean and undamaged surfaces

Our liquid-applied, peelable, protective coating dries to form a skin-tight barrier. Protectapeel makes protecting curved/uneven surfaces effortless. Before project handover, Protectapeel is simply removed by hand peeling. Surfaces are clean and damage-free preventing delays due to additional cleaning & replacements. Protectapeel is an environmentally friendly protective coating.
