ARTIFICIAL GRASS SURFACING

Artificial grass can be laid over the top of concrete, tarmac, existing grass areas (with groundworks), soil, or decking, which means it can create comfortable and safe outside spaces for schools and nurseries.

The result is a safer surface that will be able to withstand heavy footfall, require very minimal (if any) maintenance and remain usable 12 months of the year.

The Artificial Grass we supply and install consists of shock pads and absorbent layers to meet the current safety surfacing standard of BSEN 1177.

comfortable & safe solution

WETPOUR

Wetpour rubber safer surfacing is a synthetic rubber surface that is designed to minimise the risk of injuries to users of play areas. It is a long lasting and maintenance free solution that is suitable for most types of play areas.

Wetpour can be installed straight onto good quality tarmac and concrete with little groundworks required. This makes Wetpour a cost-effective safer surface for this type of sub-base.

long lasting & maintenance free

Wetpour can also be installed onto grassed areas - although this will require groundwork preparation before Wetpour can be laid.

Wetpour safer surfacing is available with a wide range of different colours and designs that can be incorporated into the surface finish - such as Roadways, Hopscotch, Animal Shapes, Numbers, Letters, etc.

The Wetpour we supply and install meets the current safety surfacing standard of BSEN 1177.

PLAYBOND

PlayBond can be laid over the top of concrete, tarmac, existing grass areas, soil, or decking, which means it can create safe outside spaces for schools, nurseries and open play areas. It can also be laid over existing Wetpour, Grass Mats or Rubber Tiles to save on the removal and disposal costs of these surfaces - to create a new, fresh and safe surface.

PlayBond is an environmentally friendly safer surfacing - as it is manufactured from recycled, shredded forklift tyres. The loose rubber is mixed with a binder onsite, and this is laid as a 'solid' yet bouncy surface.

PlayBond is also suitable for installation in landscaping areas - such as pathways, seating areas, etc - as well as creating Running Tracks / Daily Mile Tracks in school and open play area environments.

The PlayBond we supply and install meets the current safety surfacing standard of BSEN 1177.

GRASS MATS

Our Grass Mats are perfect for use in your playground. These ring-hole mats will allow the grass to grow back through the mat giving maximum protection to the user whilst keeping the grass looking as natural as possible.

Grass Mats are a recycled rubber (20% recycled rubber) safety surface used all over the UK by councils, schools, stable owners and general domestic users. They protect the ground from becoming churned up which can create a muddy mess. Grass Mats are commonly used in children's play areas but they are also the perfect product to protect your lawns, garden play areas and for equestrian access as these places tend to be prone to becoming boggy due to continual use from pets, horses and children.

Our Grass Mats are manufactured and installed to meet the current safety surfacing standard of BSEN 1177.
